Brand Playbook

Core

This document defines what Eatable is, how it operates, who it serves and how it speaks.

It is not an inspiration manual. It is a working tool.

How to use this document

Three blocks that should be read in order:

Block 1. The System
What Eatable is and how it works.

Block 2. The Audiences
Who it serves and what it provides.

Block 3. Identity and Positioning
How it presents itself and how it speaks.

Before writing a text, preparing a deck or making any communication decision, consult the relevant block. If something does not fit with what is here, the problem is not the playbook.

EATABLE ADVENTURES

What Eatable is

Eatable is a system built to **make food innovation work in the real world.**

Most innovation in food does not fail because of a lack of ideas. It fails because it never reaches business. That is the problem we solve.

We operate inside the food system, articulating strategy, capital and execution to turn ambition into measurable results.

What sets us apart is that we are an accelerator, consultancy and fund at the same time, coordinated within one single system. We do not offer isolated services. We provide access to an infrastructure that is already in motion, built to generate results.

© 2026. All rights reserved.

How the system works

The system operates in four consecutive phases. Each one depends on the previous one. None works on its own.

01 Detect

We identify the real obstacle: what is blocking adoption, where the decision chain breaks, what market gap exists and why no one has solved it yet.

02 Build

We design the right solution for the real conditions of that market and that actor, with the right knowledge, data and partners.

03 Test

We validate in real industrial environments, with the decision-makers that matter. Not in a lab or in a sandbox.

04 Scale

Only what has been tested. With the global network of hubs, corporates and investors to make it happen quickly and without starting from scratch.

In practice: a corporate can arrive with an innovation challenge and leave with an industrially validated pilot, connected to the right startups and backed by our capital if the opportunity justifies it. It is not a linear process. It is a system that is activated according to what each actor needs.

© 2026. All rights reserved.

The three layers of the system

LAYER	WHAT IT DOES	WHY IT MATTERS
Knowledge, data and access to the ecosystem	We provide the sector knowledge, data and global ecosystem needed to identify the right solution for each challenge, in the market where it operates.	Without the right information and access, innovation chases the wrong solutions.
Method and judgment	We transform opportunities into structured business decisions: business case, risk validation, internal alignment.	Good ideas die without a decision-making structure. Judgment is what separates a pilot from a result.
Execution	We make it happen inside the real system, with the actors who decide and within the timelines the business can sustain.	The only proof that something works is that it reaches operations and P&L.

© 2026. All rights reserved.

The hub network: Interconnected global infrastructure

Hubs are Eatable's most underestimated differentiating advantage from the outside. They are not offices or points of presence. They are active ecosystems, built and operated by Eatable in strategic territories, designed to exchange solutions between markets.

What makes them different is not that they exist in several countries. It is that they are interconnected: a solution validated in one hub can be piloted in another without rebuilding the network from scratch.

Madrid (Spain)	Central operations hub. Reference point of the system and home of the flagship programs.
Verona (Italy)	Access to the agri-food ecosystem of northern Italy and gateway to the continental European market.
Bogotá (Colombia)	Entry and articulation node for the Latin American market.
FoodRise, Southern Cone	Innovation hub focused on southern Latin America.
In development	Saudi Arabia and Cambodia, as strategic expansion markets.

What global interconnection enables:

- A startup validated in Madrid can pilot with a corporate in Verona without starting from scratch.
- A technology tested in Bogota can scale to Europe through the existing network.
- A government that activates a hub in its territory has access from day one to Eatable's global network of startups, corporates and investors.

© 2026. All rights reserved.

The network of corporates and institutions:

The credibility of the system

Eatable works with more than 70 companies that have executed real projects within the system: pilots, innovation programs and industrial validations. It is not a list of logos. It is proof that the model works.

When a startup joins Eatable, it gains access to operational relationships with players that have already worked with us, know the model and have real adoption capacity. This significantly reduces time to market.

The same applies to governments and institutions. The programs developed with public bodies in Spain, Italy and LatAm are the foundation on which we build new territorial proposals. We do not sell a theoretical model. We show one that is already in motion.

What the system enables when it works:

- It turns into measurable business results.
- Decisions are made with proof and judgment, not assumptions.
- Opportunities circulate between markets instead of becoming trapped in a single territory.

© 2026. All rights reserved.

BLOCK 2

The audiences

Brand Playbook — Core

© 2026. All rights reserved.

The audiences

Eatable does not speak to everyone in the same way because not everyone faces the same problem. This block defines what matters to each audience, what it needs and what we provide. It is the basis for any message, deck or commercial conversation.

CORPORATES

STARTUPS AND SOLVERS

GOVERNMENTS AND INSTITUTIONS

© 2026. All rights reserved.

1. Corporates

Eatable is the global infrastructure companies need to turn innovation into business results.

→ An operating system built inside the food sector, with active hubs in Europe and LatAm, living ecosystems and a methodology tested in more than 70 companies.

WHAT HOLDS THEM BACK: Most companies know what problem they need to solve. What holds them back is what comes next.

THE OBSTACLE	HOW IT MANIFESTS	WHY IT DOES NOT RESOLVE ITSELF
Access	Finding the right data, the right partner or the relevant technology is harder than it should be. The food ecosystem is broad, fragmented and moves fast.	Without the right network and sector knowledge, it takes months to reach what already exists.
Method and judgment	Something promising is identified, but it cannot be turned into a business case. The idea makes sense, but it is not clear how to validate it, what it would cost or how to justify it internally.	Without a decision-making structure, projects die in committees before reaching the pilot.
Execution	It has been tried before, but it never reached the business. Not because the idea was bad, but because it never moved beyond the pilot.	Pilots without a clear route to operations do not scale. They stall or get archived.

© 2026. All rights reserved.

1. Corporates

WHAT EATABLE PROVIDES:

- Direct access to the right knowledge, data and partners for the specific challenge, in the markets where they need to operate.
- A methodology tested in more than 70 companies that transforms opportunities into real business decisions.
- The execution and global network to make it happen, without starting from scratch.

KEY MESSAGE

“Most innovation dies in decks. Our goal is for it to reach operations. In 6 to 12 months, not in 3 years.”

© 2026. All rights reserved.

2. Startups and Solvers

Eatable is the global infrastructure that gives promising solutions from startup founders a credible route inside the food system.

→ An operating system with active presence in Europe and LatAm, with direct access to the markets, corporates and institutions that decide what gets adopted and what scales.

WHAT THEY FACE:

The gap between having a promising solution and gaining real traction.

They have technology validated in the lab, but no access to the decision-makers who would adopt it. They accumulate pilots that lead nowhere. They present at events, receive positive feedback and still fail to close.

The problem is not the product. It is that they do not have access to the system where that product becomes real business.

© 2026. All rights reserved.

2. Startups and Solvers

WHAT EATABLE PROVIDES:

- Support to shape their solution commercially and industrially, with real market judgment.
- Access to the global system: validation with relevant players in multiple markets and direct connection with those who make purchasing or adoption decisions.
- Capital, when the opportunity justifies it and the timing is right.

KEY MESSAGE

“80% of startups do not fail because of the product. They fail because they never manage to turn it into business. We have the system to prevent that from happening.”

© 2026. All rights reserved.

3. Governments and Institutions

Eatable is the global infrastructure that turns territorial ambition into an operating ecosystem with real economic impact.

→ A system with active presence in multiple territories, with the network, knowledge and operational experience to build ecosystems that attract talent, investment and lasting economic activity.

WHAT THEY FACE:

They design innovation strategies that do not translate into real activity. They fund ecosystems that do not coordinate. They launch hubs that do not generate traction or visible economic impact beyond the inauguration event.

The challenge is not the vision. It is that they do not have the operating model to make it work over time.

© 2026. All rights reserved.

3. Governments and Institutions

WHAT EATABLE PROVIDES:

- The design of the right model for their territory, based on what already works in other markets. Not a theoretical proposal: a tested and replicable model.
- Real activation of the ecosystem and its key actors, with access to a global network of startups, corporates and investors.
- Operational continuity so innovation is visible, structured and long-lasting, not a one-off project with no continuity.

KEY MESSAGE

“We have built innovation ecosystems that work in several territories. We do not sell the idea. We bring the model we have already tested and adapt it to your context.”

The Beating Heart

Back to index

EATABLE ADVENTURES

The Beating Heart is not a claim. It is not a slogan.

It is the description of how the system works when it works well.

When we bring together the right people, build solutions that fit real conditions and test them where the market says yes or no, the system starts to move. That is the heartbeat.

Without the system, there is no heartbeat. Without the heartbeat, the system is empty infrastructure. Together, they turn ambition into real, measurable impact.

© 2026. All rights reserved.

Brand principles

PRINCIPLE	WHAT IT MEANS	HOW IT IS APPLIED
Execution over intention	We value what is done, not what is announced.	We do not talk about future plans without showing what we have already executed.
Proof before scale	We do not scale what has not been validated.	Cases and data come first. The promise comes after.
Inside the system	We operate from within, not as external advisors.	We are specialists with skin in the game: we invest, co-execute and co-risk.
Confidence without arrogance	We are direct and assured without needing to impress.	We never inflate results or use language that sounds like hype.

© 2026. All rights reserved.

Tone of voice

How we speak defines who we are.

Eatable's tone has four characteristics:

No empty words	Nothing that any other company in the sector could say. If the text does not provide concrete information, it is not published.
Grounded in reality	We talk about what we do, with real data and cases. Not about what we aspire to do.
Results-oriented	Every message must answer: what does this provide to the client in business terms?
Confident, not arrogant	We trust what we do. We do not need to inflate anything for it to be understood.

© 2026. All rights reserved.

Tone of voice

The difference in practice

Eatable's tone is not just a matter of style. It is defined by underlying decisions. These examples illustrate the most important ones:

WHAT EATABLE DOES NOT SAY	WHAT EATABLE SAYS
"We catalyze the global food ecosystem to co-create solutions with sustainable impact."	"We have active hubs in four territories. In each one, there is activity and industrial projects underway with real corporates."
"We offer a holistic and integrated approach to transforming the food system."	"We work with the corporate from challenge definition to the validated pilot. Without intermediaries, in 6 to 12 months."
"We generate synergies between the different actors in the ecosystem to maximize collective impact."	"When a startup joins our program, it already knows which company it will pilot with. That is what makes it work."
"We are the reference hub in food innovation internationally."	"70 companies have executed real projects with us. That gives us a view of where innovation gets blocked that cannot be improvised."

© 2026. All rights reserved.

Back to index

Narrative principles

Every Eatable text, deck or conversation must follow these principles:

- Start from the client's real problem, not from what we are or what we offer.
- Move quickly to execution. The methodology is not the point; the results are.
- Make everything tangible. Names, figures, timelines, real cases. Nothing abstract.
- Show proof before promise.
- Speak in business terms: P&L, timelines, decisions, economic impact.
- Stay inside the system. We do not speak from the outside as observers. We are an active part of it.

2026. All rights reserved.

Back to index

Brand point of view

The food system does not need more promises.
It needs solutions that work under real conditions.

Most innovation does not fail in the idea.
It fails in execution.

We focus on what reaches business.

1. Introduction

Brand Guidelines — Soul

© 2026. All rights reserved.

What this document defines

> This document defines exclusively how Eatable Adventures should live visually after the brand refresh.
>
> It does not replace the Playbook (Core): **it accompanies it.** If the Core explains what the brand is, who it serves and how it thinks, these Guidelines explain how it looks, how it is organized and how it should be applied in real pieces.

Role within the brand ecosystem

Eatable's visual identity must function as an operational tool.

Every physical or digital communication piece or proprietary product must be recognized as part of the same system. The brand should not feel rigid, bureaucratic or ornamental; it should be perceived as a human and active infrastructure that connects strategy, capital, execution and ecosystem.

Brand refresh

Before, Eatable relied mainly on its logo.

Now, the brand is articulated around its own positioning: The Beating Heart of Food Innovation.

From that heartbeat comes a visual system designed to express pulse, rhythm and impact at every touchpoint.

The Beating Heart of Food Innovation

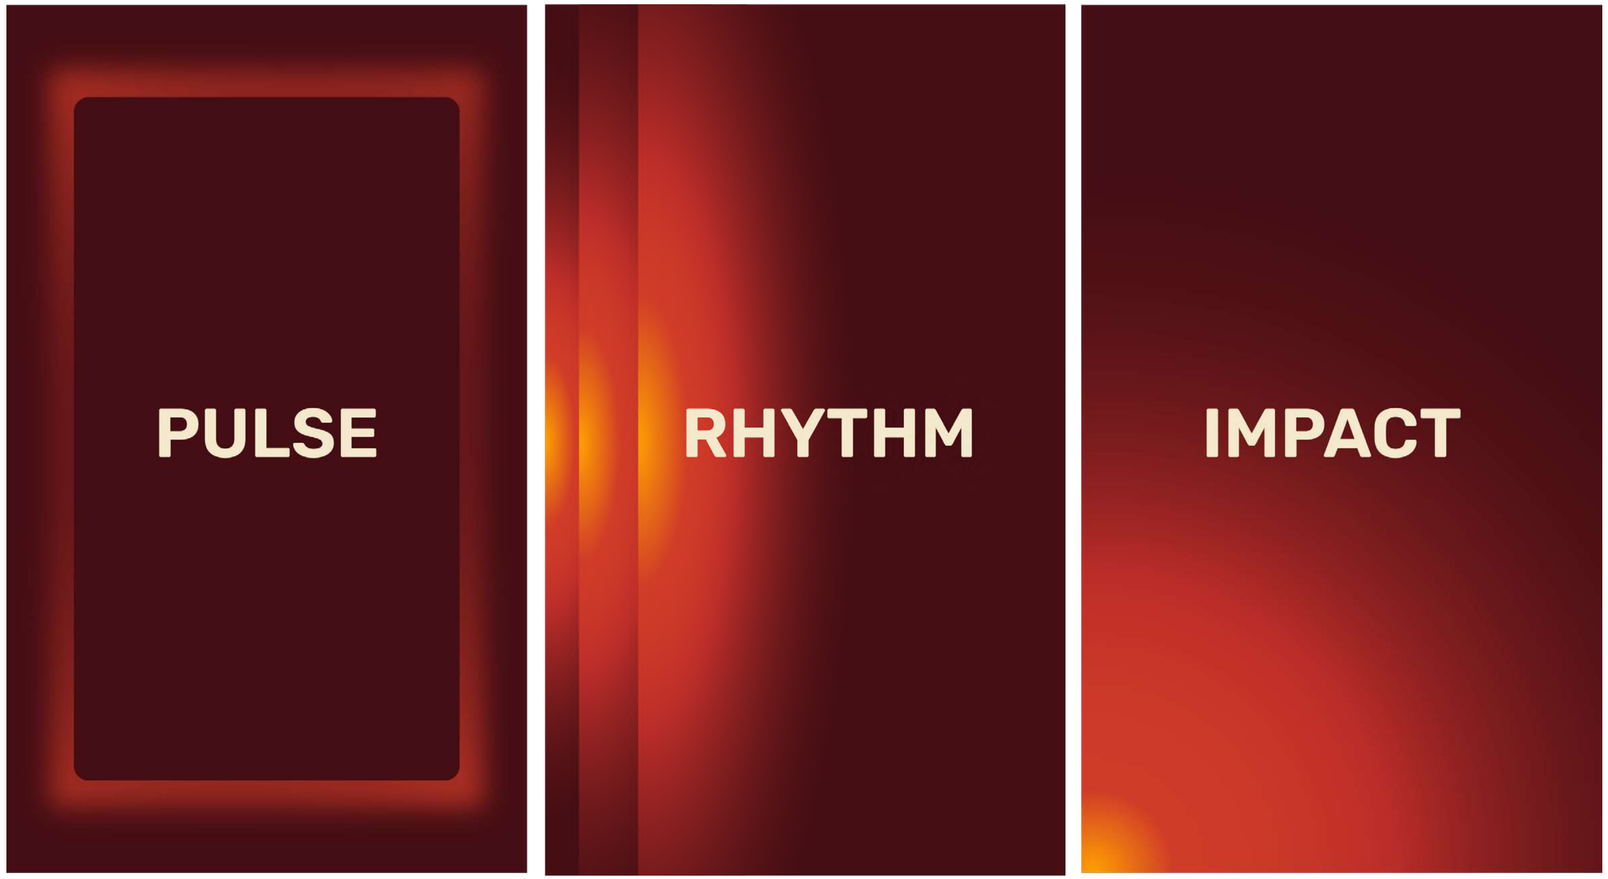

© 2026. All rights reserved.

Guiding principle

Eatable’s visual system is born from the heartbeat: that Beating Heart that drives innovation inside the food industry and turns intention into real movement.

That is why the core of Eatable’s visual system is built from three ideas: pulse, rhythm and impact. **Pulse** is the initial activation; **rhythm** is the continuity that organizes movement; **impact** is the visible change that expands.

From this logic, the brand’s main graphic devices are developed, together with other complementary resources that broaden the system without moving away from the same central idea.

© 2026. All rights reserved.

How to use these guidelines

Before designing any piece, it is useful to answer three questions:

- Which audience will receive it?
- What type of application is it?
- What level of brand intensity does it need?

Eatable's identity is not applied in the same way across all communication pieces, such as a sales deck, a consulting document, a proprietary product or merchandising.

DO	DON'T
Use this document as a decision guide, not as a moodboard.	Do not turn every piece into a style exercise.
Always think about the balance between clarity, energy and proof.	Do not use visual resources just because they "look good."
Adapt visual intensity to the context of use.	Do not disconnect the visual identity from Eatable's business logic.

© 2026. All rights reserved.

2. Visual system

Brand Guidelines — Soul

© 2026. All rights reserved.

Elements that make up the system

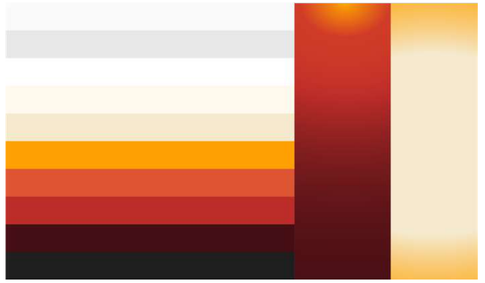

Eatable’s visual identity is built from a limited set of elements that work together in a coordinated way. The main elements of the toolkit are: logo, claim, color palette, Rubik typography, photography, gradient system, light point, grid, pills, structural lines, figures and hierarchy resources.

Logo + Claim

Summary of Graphic Elements

© 2026. All rights reserved.

How the system should behave

As a baseline, any piece should rely on at least **four components: Rubik typography, the official color palette, a clear composition criterion and correct use of the logo.** From there, the rest of the elements are scaled according to the application.

DO	DON'T
Reduce the system to its essentials when the content requires it.	Do not introduce external resources that do not belong to the system.
Use the system as a family of coherent resources.	Do not make every page use a different system.
Maintain consistency between elements, not repeat them all at once.	**Do not mix several visual behaviors if they compete with each other.**

© 2026. All rights reserved.

3. Design principles

Brand Guidelines — Soul

© 2026. All rights reserved.

The brand as a system in motion

Visually, Eatable should feel like a living system. Not like a decorative brand or a generic corporate manual. It must convey that there is an engine behind it: a connected, active and results-oriented infrastructure.

The design principles that **should mainly guide the identity are:** operational clarity, contained energy and real humanity.

Together, all of this should reflect structure with movement and a premium presence without arrogance. The brand does not shout, but it does not disappear either.

Operational clarity

Through typography and composition hierarchy.

Information must be read quickly. Direct headlines, clear modules, clean hierarchies and enough air are more important than the graphic gesture. Eatable's sophistication lies in judgment, not complexity.

Contained energy

Through the color palette and brand graphic elements.

Eatable needs intensity, but controlled intensity. The red, the light point and the gradients must activate the composition without making it noisy. The energy should feel precise, not chaotic.

Real humanity

Through photography.

The brand works with food innovation in the real world. That is why the identity must allow people, contexts, processes and decisions to feel close, in action, tangible and useful. Never cold or excessively abstract.

© 2026. All rights reserved.

Invest in it.

Contained energy

Color palette and graphic elements

Real humanity

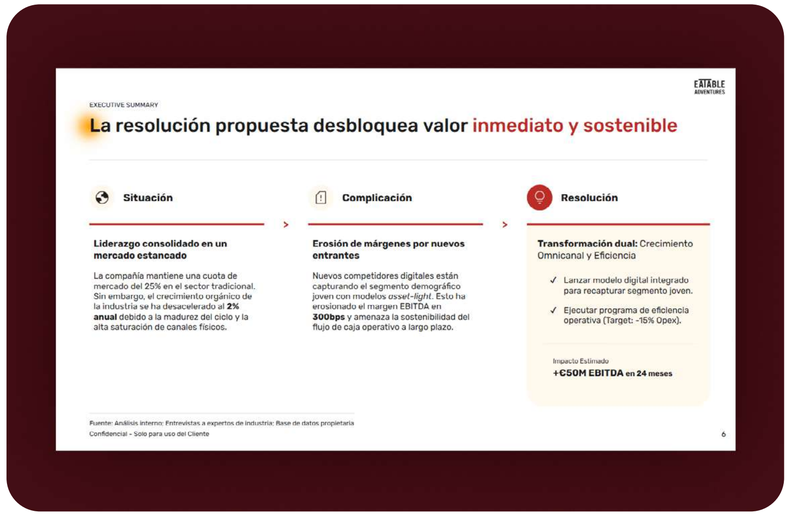

Photography

© 2026. All rights reserved.

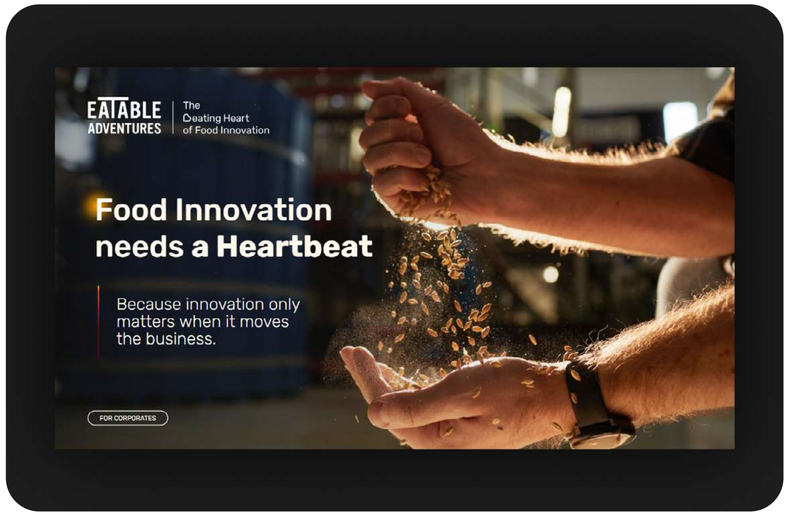

Brand expression scale

Eatable should not look the same across all media. There is an expression scale that ranges from more functional and restrained uses to more expressive, high-impact uses. The identity adapts to the context, but without losing coherence.

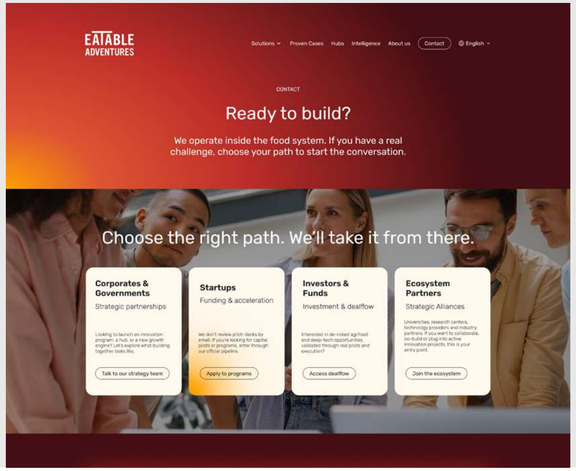

Restrained expression

Intermediate expression

High expression

The more functional the piece, the more the brand is simplified. The more narrative or commercial the touchpoint, the more its expressiveness can grow.

© 2026. All rights reserved.

Brand expression scale

Restrained expression: corresponds to consulting, data pages, reports, proposals with high information density and materials where reading takes priority over the brand gesture. **Here, white, creams, typography, structure and subtle accents dominate.**

Intermediate expression: used in internal decks, sales decks, methodology pages, scientific reports and pieces that need to combine clarity with slightly stronger brand presence. **Here, photography, modules, dividers and a more visible use of the visual system come in.**

High expression: reserved for covers, video, campaigns, web, positioning messages and communications where the brand needs to be memorable. **Here, darker backgrounds, dominant red, hero photography, pulse, impact and a stronger claim may appear.**

DO	DON'T
Choose the brand level according to the document's objective.	Do not apply the same level of visual expression to every piece.
Lower the intensity when information density increases.	Do not turn operational pieces into campaign pieces.
Raise it when the piece needs to position or sell.	**Do not create pieces without first asking whether a template exists.**

© 2026. All rights reserved.

4. Logo

Brand Guidelines — Soul

© 2026. All rights reserved.

Original version

Eatable Adventures has a main logo that predates the brand refresh and remains one of the official configurations of the system. This version without claim represents the brand’s continuity and should be used when Eatable acts as a signature, seal or main identifier without needing to deploy the full positioning.

This is the main logo version and the option to choose when Eatable appears in small formats, multi-logo compositions or pieces where it coexists with other brands. By not including the claim, it guarantees greater legibility and clarity at reduced sizes.

LOGO

DOWNLOAD

© 2026. All rights reserved.

Versions with claim

With the brand refresh, the identity evolves from a new positioning: The Beating Heart of Food Innovation.
This positioning introduces a more strategic and expressive layer within the brand system, which is why it gives rise to two new official configurations in which the logo and claim coexist in a structured way.

LOGO + CLAIM

DOWNLOAD

© 2026. All rights reserved.

Allowed color uses

The logo and claim can only be applied in two color forms: positive, on a white background; and negative, on dark backgrounds or the brand’s reds, whether flat or built with approved gradients. In all cases, the separator line must always keep the same color as the logo and claim.

POSITIVE

White background and logo in EAV Black or solid EAV Red. Or EAV Cream background with EAV Black logo.

NEGATIVE

Black or EAV Red background, or approved gradients, and logo in white.

© 2026. All rights reserved.

When to use each version

ORIGINAL VERSION

This is the **seal, signature or main logo** in applications where space is limited or where it is not necessary to reinforce the positioning in every appearance. It is the most restrained and versatile option in the system, suitable for inner pages, signatures, small formats or pieces where Eatable acts as a brand endorsement.

HORIZONTAL VERSION WITH CLAIM

It works best on covers, title pages, headers and institutional pieces where it is useful to clearly reinforce the brand positioning. **It is the most suitable configuration when the logo must be presented together with The Beating Heart of Food Innovation** with comfortable and stable readability, especially in formats with enough space.

VERTICAL VERSION WITH CLAIM

Used in centered or vertical formats, when the composition requires a block reading and where space is more limited. **This version is used in third place when neither of the other two applies** and allows the system to look ordered, balanced and more condensed, while maintaining the relationship between brand and positioning.

© 2026. All rights reserved.

Clear space

The logo must breathe. The recommended minimum area around the set can be defined using the height of the T in the logo. No text, image, border or light point should invade this zone. **This principle works for both versions with and without claim.**

Recommended minimum sizes

As a baseline, in digital the logo without claim **should not be used below 80 px wide**; the horizontal version with claim below 240 px; and the vertical version with claim below 120 px. In print, sizes must be validated with the final artwork.

DIGITAL VERSIONS	EATABLE ADVENTURES Min 80 px wide	EATABLE ADVENTURES | The Beating Heart of Food Innovation Min 240 px wide	EATABLE ADVENTURES The Beating Heart of Food Innovation Min 120 px wide

© 2026. All rights reserved.

Logo placement

Corner placement

The logo should be placed at the **top or bottom** of most applications, functioning as either an opening element or a closing signature for the piece. It can be aligned **left or right** depending on its function within the composition. When placed in a corner, a uniform margin must be maintained between the logo and the edges of the format.

Centered placement

The logo can be centered when it acts as the main message of the application, for example in animations, exhibition materials, high-impact covers, banners or pieces where the brand plays a leading role. Since the Eatable Adventures logo is not completely symmetrical, its centering must be solved optically so that it feels balanced within the format.

© 2026. All rights reserved.

Incorrect uses

To ensure consistency and recognition across all touchpoints, the Eatable Adventures logo must always be applied correctly. Uses that alter its form, proportion or behavior within the system must be avoided.

Only approved versions should be used, always maintaining a uniform color between logo, claim and separator line, and ensuring enough contrast before placing it over any background.

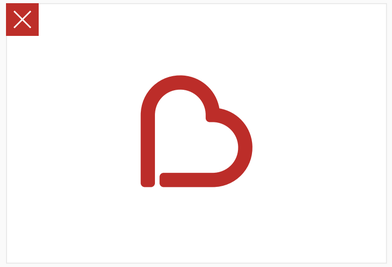

Do not use unapproved colors or gradients. Also, do not mix color versions.

Do not combine the logo with unapproved product, program or initiative names.

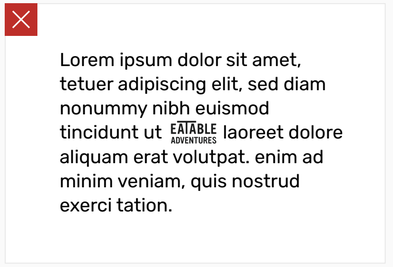

Do not rotate, deform or change the original shape of the logo.

Do not separate elements of the logo or claim to use them independently.

Do not change the distance between the logo, separator line and claim in the official versions.

Do not use the logo inside body text or as a typographic substitute.

© 2026. All rights reserved.

5. Claim

Brand Guidelines — Soul

© 2026. All rights reserved.

Back to index

Claim construction

The Beating Heart of Food Innovation should not be understood only as a positioning phrase; within the Eatable Adventures identity system, the claim also functions as a graphic piece of its own.

Its construction is based on Rubik typography, but it incorporates specific adjustments that turn it into a distinctive brand element. The B in Beating Heart has been modified with a bespoke graphic device that suggests the heartbeat, and the spacing between letters and words has been adjusted to build a more compact, balanced and recognizable block within the composition.

CLAIM

DOWNLOAD

© 2026. All rights reserved.

Claim construction

Because of its detailed and justified composition, the claim must not be rebuilt, rewritten or manually composed using the typeface. Its kerning, proportions, line breaks or visual behavior must not be modified either. Whenever the claim is used as a brand graphic element, **only its official files must be used.**

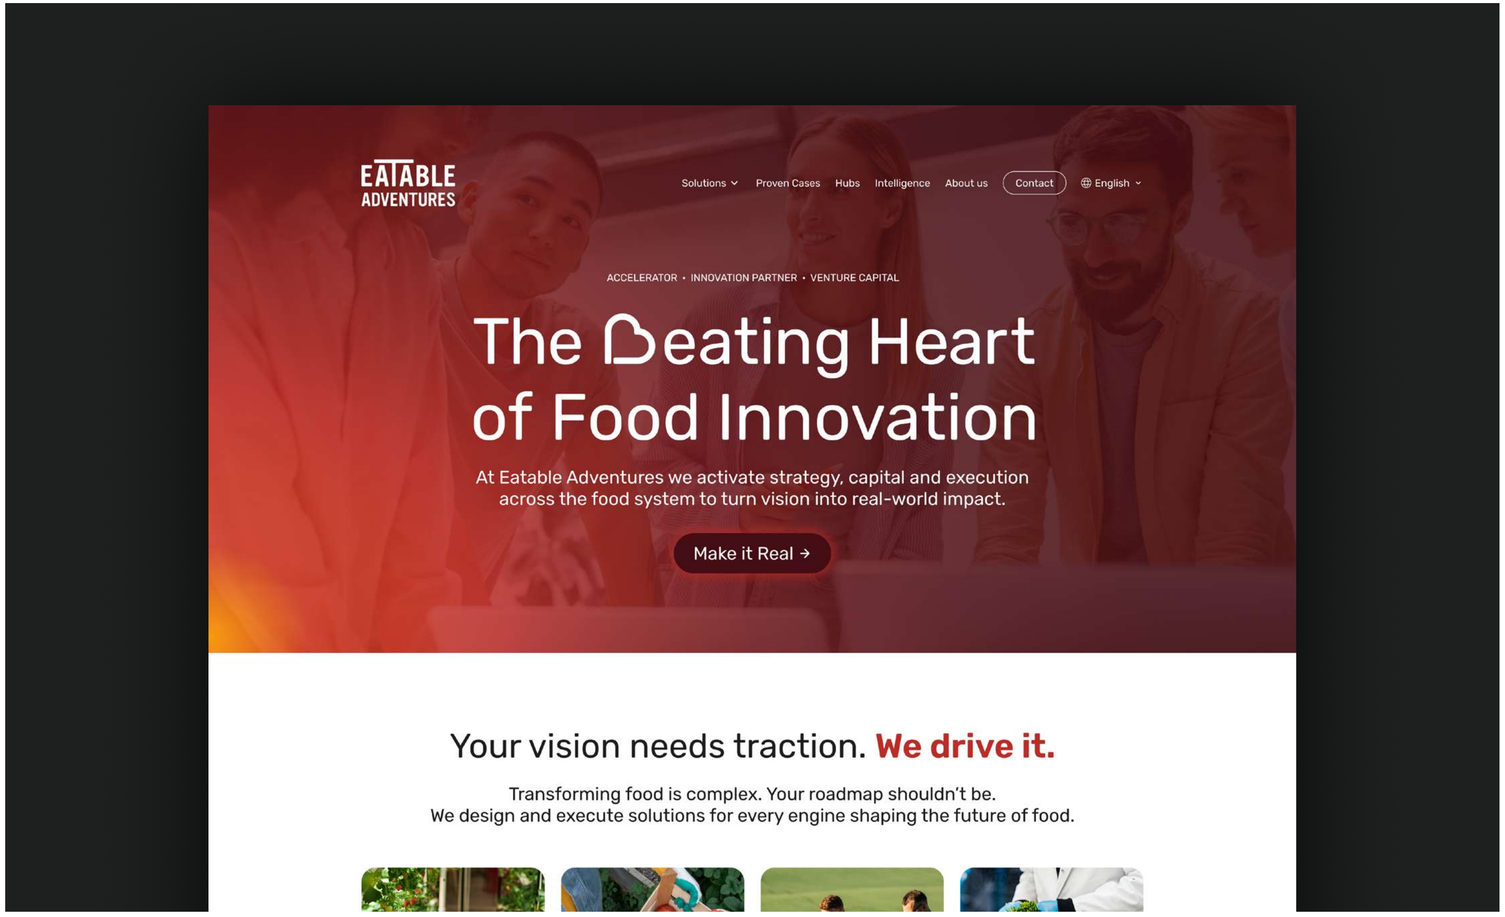

© 2026. All rights reserved.

Hero use of the claim

In addition to coexisting with the logo in its approved versions, The Beating Heart of Food Innovation **can function as the main message in certain high-impact pieces.**

This happens in formats such as the website hero, covers, campaigns, presentation openers or editorial pieces where the brand needs to express itself first through a strong and memorable idea. In these cases, the claim can gain scale, prominence and visual autonomy within the composition.

This use allows the positioning to act as a direct expression of the brand, while always maintaining its clear link with Eatable Adventures.

© 2026. All rights reserved.

Relationship between hero claim and logo

When the claim takes on a leading role, **the Eatable Adventures logo does not disappear: it becomes the brand signature**. In these cases, the claim may occupy the main position in the piece, provided the logo remains within the same field of vision, so that brand authorship is immediate and clear.

The logo can be placed in an upper or lower corner or in a centered position if the composition requires it. Its function is not to compete with the claim, but to sign the piece and maintain a clear visual relationship with the positioning.

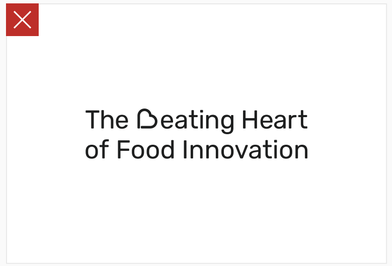

© 2026. All rights reserved.

Back to index

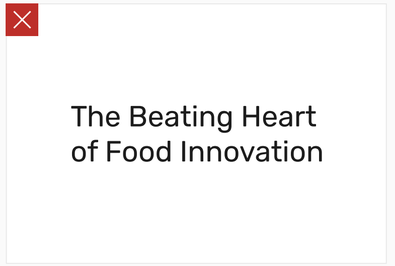

Incorrect uses

To ensure consistency and recognition across all touchpoints, the claim must always be applied from its official versions. Uses that alter its composition, proportion or relationship with the logo must be avoided.

The claim must always be used from its approved original file. It must not be recreated manually, rewritten with typography or rebuilt from its elements. Its composition, proportions, kerning, line breaks and formal relationship must remain intact to ensure consistency across all brand touchpoints.

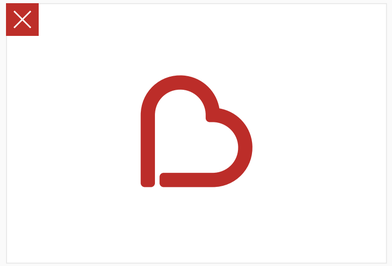

Do not use the claim as the hero element without the Eatable Adventures logo as a signature.

It must not be rebuilt, rewritten or manually composed using the typeface.

Do not use the Eatable Adventures logo as a signature next to the hero claim in a lower corner.

Do not separate elements of the claim to use them independently.

Do not include a separator line between logo and claim when the claim is the hero element.

Do not change the composition of the claim.

© 2026. All rights reserved.

6. Color system

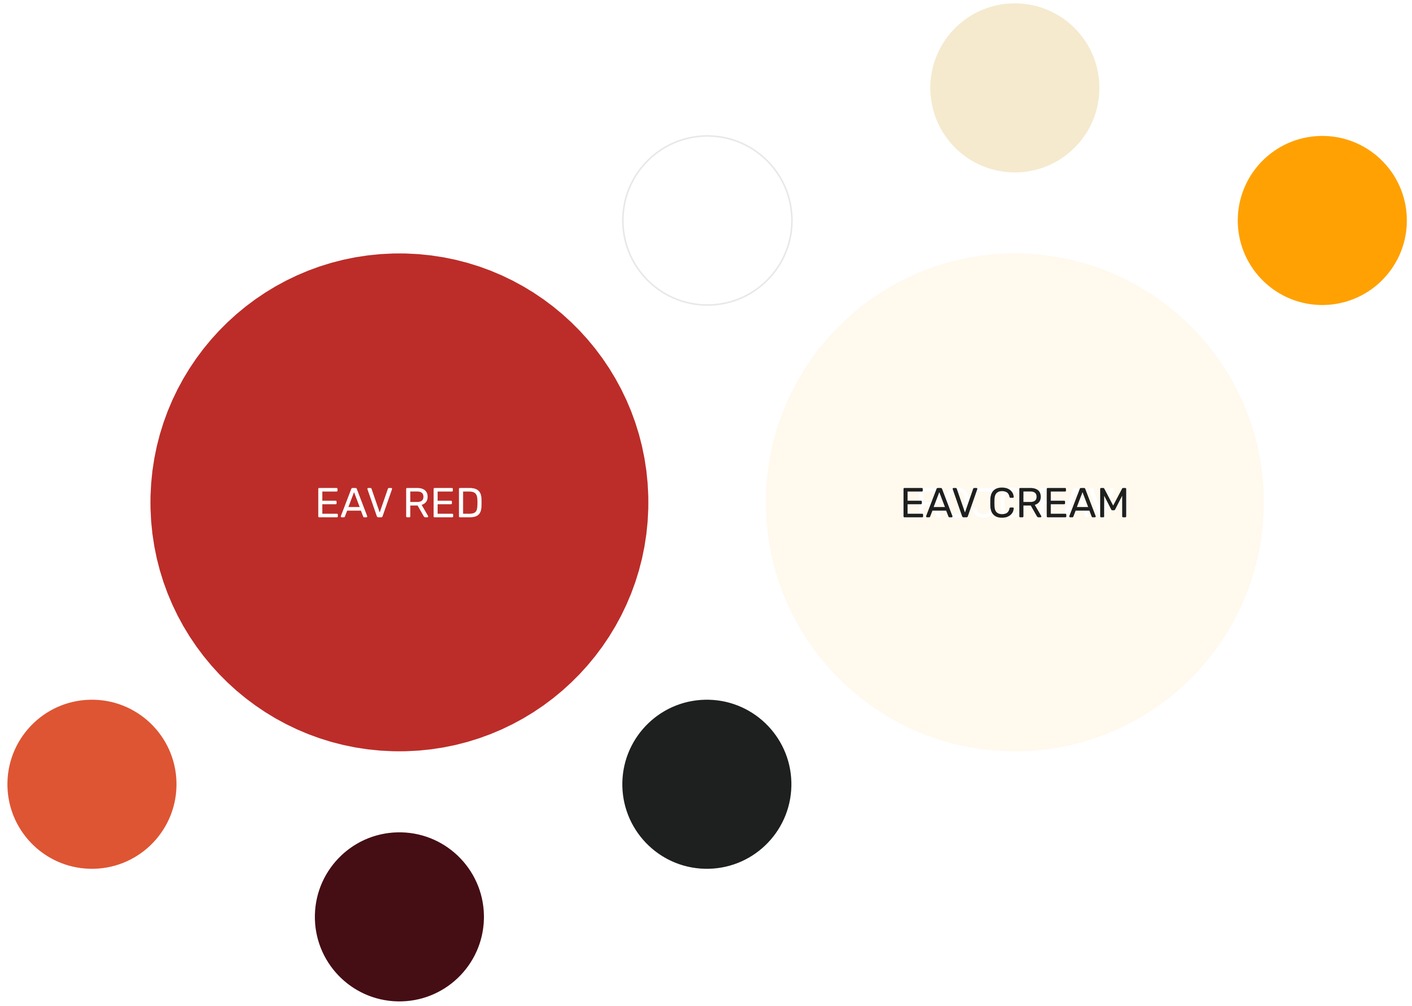

Brand Guidelines — Soul

© 2026. All rights reserved.

Where the palette comes from

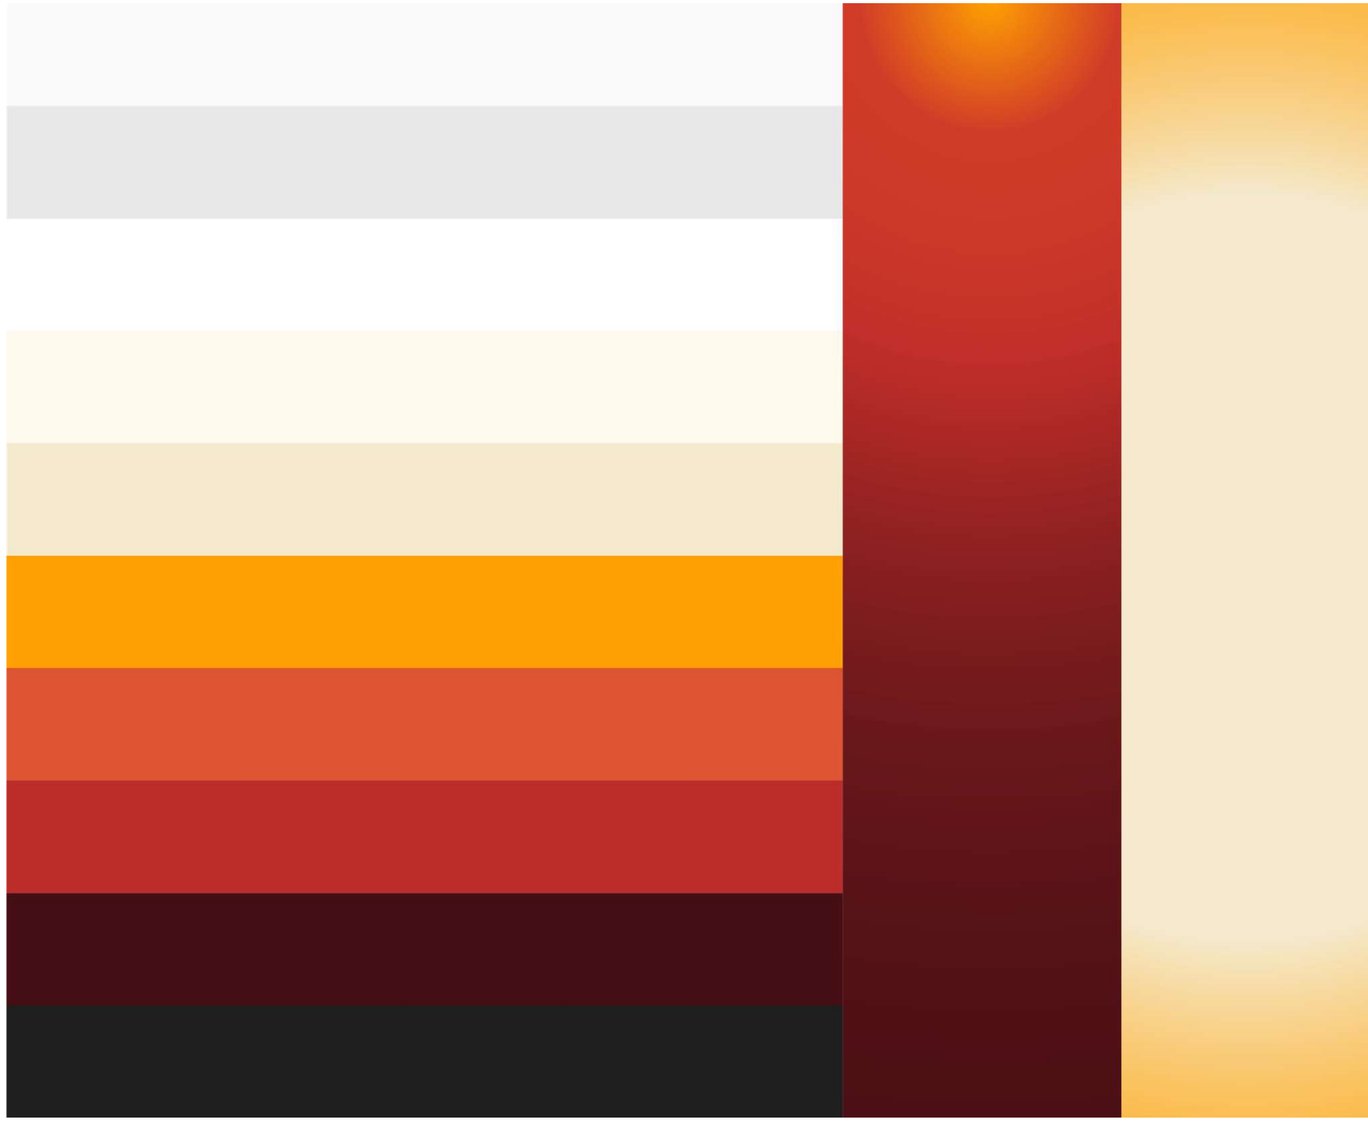

Eatable Adventures' color system is born from two main colors: EAV Red and EAV Cream. Both are based on tones that already existed in the brand before the refresh, but have been adjusted for this new stage with the aim of gaining vividness, warmth and precision.

In this way, **the new palette maintains continuity with Eatable's trajectory, but is redefined to respond more clearly and coherently to its current identity.** From these two mother colors, the system expands with complementary tones that allow the construction of a more complete, flexible palette, ready for its different touchpoints.

© 2026. All rights reserved.

Color palette

With the brand refresh, color stops functioning only as a graphic support and takes on a central role within the Eatable Adventures visual system. The new palette is built from EAV Red and EAV Cream, two base colors from which the rest of the system's tones derive.

Together, this palette allows the construction of gradients with a more expressive and narrative charge, aligned with the positioning The Beating Heart of Food Innovation. Through different combinations, intensities and transitions, color becomes the guiding thread of the visual identity and shapes the Pulse, Rhythm and Impact graphic elements, which visually develop the idea of the heartbeat across all brand touchpoints.

© 2026. All rights reserved.

Specifications

For screen applications or RGB environments, the brand’s official hexadecimal codes must always be used. In print, RGB should not be automatically converted to CMYK; instead, the CMYK values previously approved with the printer should be used to reproduce in physical form the colors as close as possible to their digital version. These values are detailed below.

WHITE

RGB / HEX : #FFFFFF
CMYK: 0 | 0 | 0 | 0

EAV LIGHT GREY

RGB / HEX : #FAFAFA
CMYK: 2 | 2 | 2 | 0

EAV GREY

RGB / HEX : #E8E8E8

RGB / HEX : #F5EACE
CMYK: 0 | 4 | 16 | 4

EAV YELLOW

RGB / HEX : #FFA103
CMYK: 0 | 44 | 93 | 0

EAV ORANGE

RGB / HEX : #DE5533
CMYK: 0 | 75 | 80 | 8

EAV RED

RGB / HEX : #BC2D29
CMYK: 0 | 93 | 80 | 22

EAV BURGUNDY

RGB / HEX : #450E14
CMYK: 0 | 80 | 71 | 73

© 2026. All rights reserved.

Color composition of the gradients

1. Main brand gradient

This is the most representative gradient of the system. It goes from EAV Yellow to EAV Burgundy in radial format and is used in backgrounds and in the construction of the **Rhythm and Impact** graphic elements.

2. Call-to-action gradient

In buttons or CTAs, the pulse is built through a parallel shadow of the same color, generating a soft expansion that reinforces the activation of the element.

3. Secondary gradient

This gradient is reserved for very specific uses, mainly in the brand's own products and landing pages. Its function is to provide a visual pause in compositions heavily loaded with reds, introducing a cleaner, softer and more restrained moment within the system.

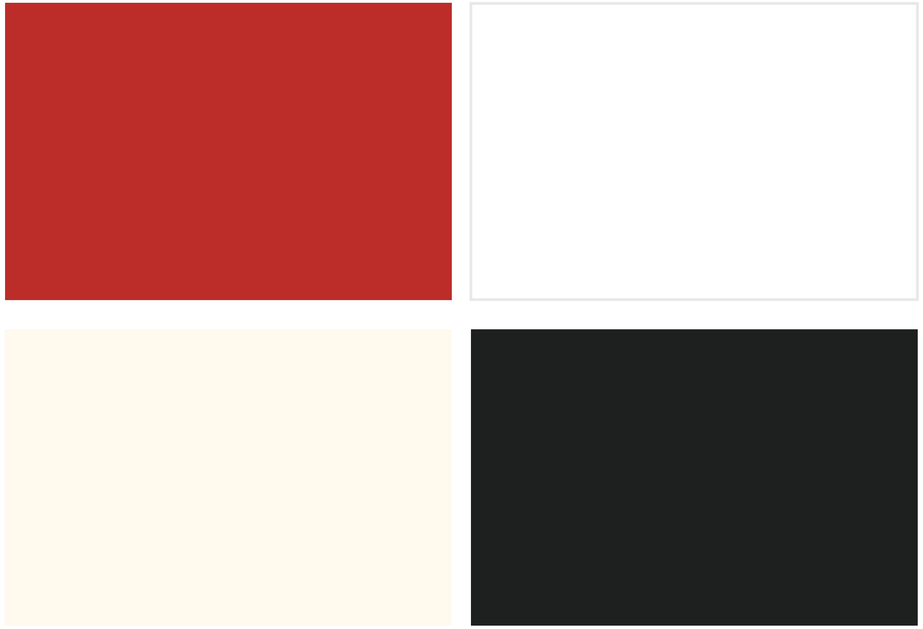

© 2026. All rights reserved.

Color hierarchy

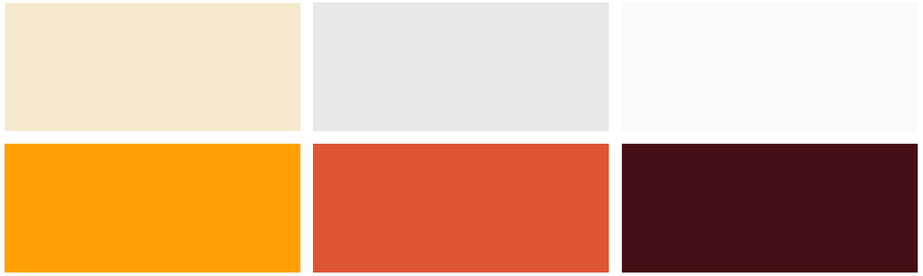

The Eatable Adventures palette works with a clear hierarchy and each color has a role within the system. This hierarchy applies to the general visual identity; in data visualization, several colors from the palette may be used in an ordered way according to their own chromatic logic.

- **EAV Red** is the brand's representative color.
- **White** is one of the most predominant colors in the system and balances the intensity of the gradients, bringing cleanliness, air and clarity.
- **EAV Cream** is used in highlighted blocks and editorial backgrounds with a strong presence in the system.
- **EAV Black** is used for footers and typography.
- **EAV Dark Cream** is used to compose secondary gradients.
- **EAV Light Grey and EAV Grey** are used mainly in consulting materials and dividers within brand pieces.
- **EAV Yellow** is reserved exclusively for building the light point.
- **EAV Orange** appears only as a transition within the gradient.
- **EAV Burgundy** is used in closing moments, CTAs or moments of greater visual depth.

PRIMARY COLORS

SECONDARY COLORS

© 2026. All rights reserved.

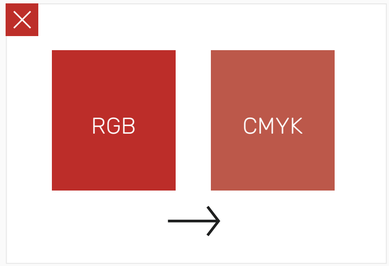

Incorrect uses

The color system must always be applied with judgment. Color does not function as a decorative resource, but as a structural tool within the visual system. For this reason, uses that break the hierarchy of the palette, alter the balance between moments of intensity and rest, or compromise the legibility of the piece must be avoided.

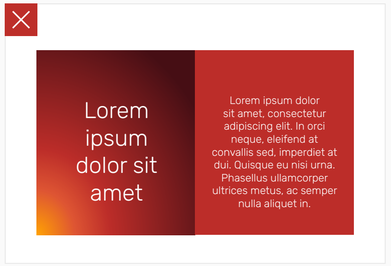

Correct use of color begins with respecting the approved palette, its hierarchy and its function within the system. Each tone must be used with intention, maintaining balance, contrast and coherence with the type of piece.

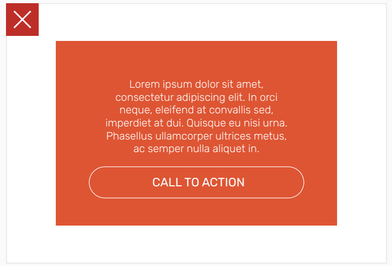

Do not introduce colors outside the approved palette, not even in consulting.

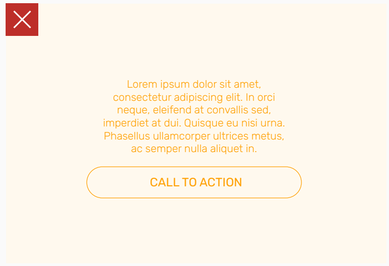

Do not automatically convert RGB colors to CMYK.

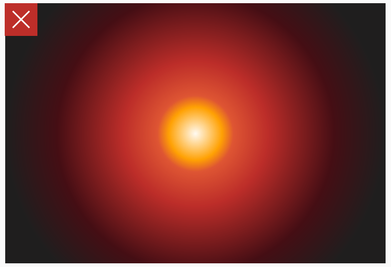

Do not saturate pieces with excessive reds or gradients.

Do not use yellow or orange as hero colors outside the gradient system.

Do not build compositions with insufficient contrast between text and background.

Do not build gradients that are not explained in this manual, whether in this section or in graphic elements.

© 2026. All rights reserved.

7. Typography

Brand Guidelines — Soul

© 2026. All rights reserved.

Type family

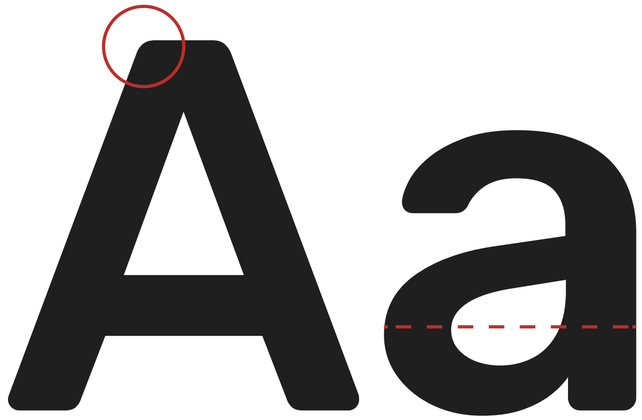

Rubik is the only type family used by Eatable Adventures; there is no secondary typeface.

It was chosen not only for the clarity of its forms and high legibility, but also for its balance between precision and a human touch, aligned with the brand's character. In addition, its wide variety of weights brings versatility to the system and makes it easier to build hierarchies across different media.

As a Google Fonts typeface, it can be downloaded freely, which makes it easier for teams to adopt and ensures consistent implementation across all brand communications.

Rubik

Light, Regular, Medium, Bold, Extrabold and Italic.

DOWNLOAD TYPEFACE

Google Fonts

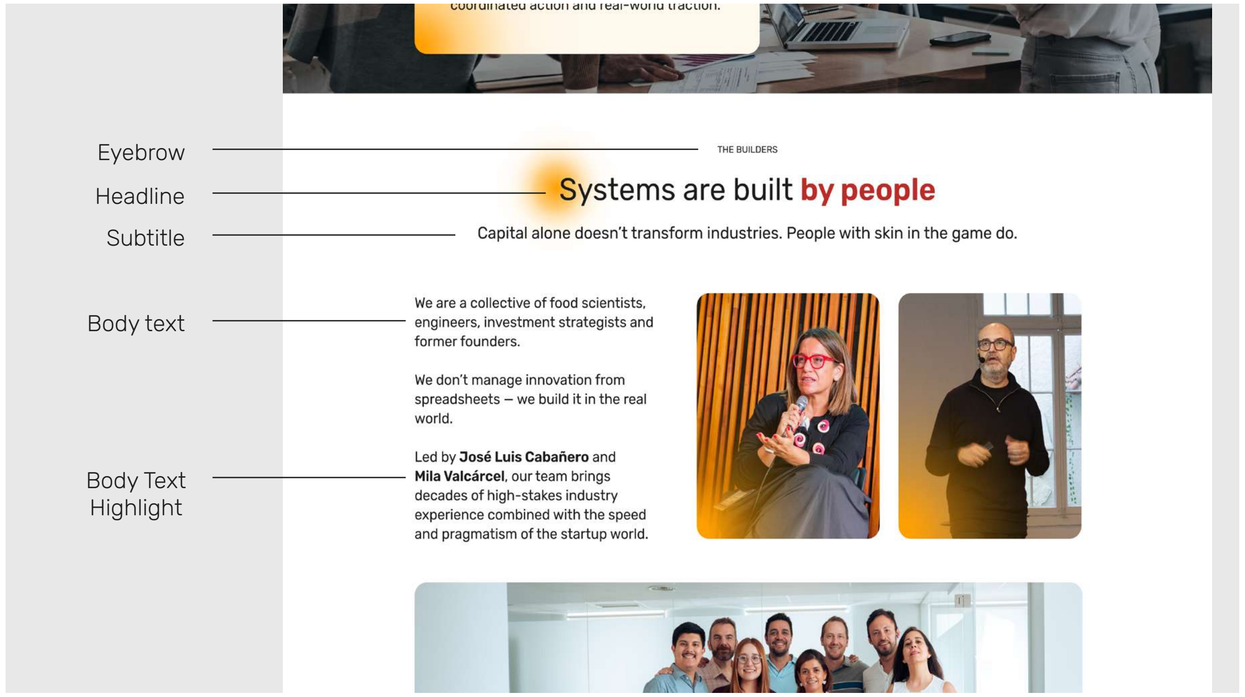

© 2026. All rights reserved.

Typographic hierarchy

The typographic hierarchy of Eatable Adventures is built by combining weight and size. Although several levels share the same weight, their function changes depending on scale and where they sit within the composition. Therefore, hierarchy does not depend only on typographic style, but also on size, spacing and context of use.

Eatable Adventures works mainly with Rubik Light, Regular, Medium, Bold, Extrabold and Italic, with the following uses:

- **Eyebrows** are set in Rubik Regular and always in full uppercase.
- **Headlines** are built in Rubik Regular, with words or fragments highlighted in Bold, and are written with an initial capital letter and the rest in lowercase.
- **Subtitles** are also set in Regular, but at a smaller size than headlines.
- **Body text** is set in Regular, with highlights in Bold; in very long documents, it may move to Light with highlights in Medium to support a lighter, more balanced reading experience.

© 2026. All rights reserved.

Typographic hierarchy

This table serves as a reference for understanding how typography is organized within the Eatable Adventures visual system. Rather than applying exact sizes, the important thing is to respect the hierarchy logic: what role each text plays, what weight it uses and how much prominence it should have within the composition.

Sizes cannot be completely universal because Eatable works across different software: Google Slides, Canva, Adobe and Figma; and each one renders typography differently. Therefore, the same size can look different depending on the platform, resolution or final medium.

The hierarchy should be applied proportionally, always maintaining a clear difference between eyebrow, headline, subtitle, body and highlights.

Type	Size	Uppercase / Lowercase	Weight	Color
Eyebrow	7 px	All uppercase	Regular	
Headline	20 px	First letter uppercase	Regular	
Highlighted word in headline	20 px	Lowercase	Bold	
Subtitle	16 px	First letter uppercase	Regular	
Small body-text heading	11 px	First letter uppercase	Bold	
Body text	9 px	First letter uppercase	Regular	
Highlighted word in body text	9 px	Lowercase	Bold	

© 2026. All rights reserved.

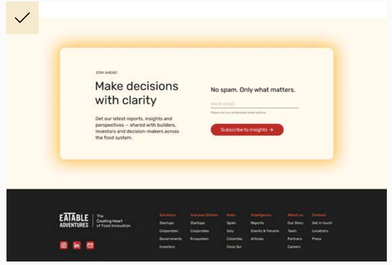

Back to index

Typography and color

Color in Eatable Adventures typography must always be used with criteria of legibility, contrast and hierarchy. The approved combinations respond to the general behavior of the color system and guarantee clear reading across all brand touchpoints.

In headlines, one highlighted word may be used in red to introduce a specific emphasis, but this resource must be restrained and should not be transferred to body text.

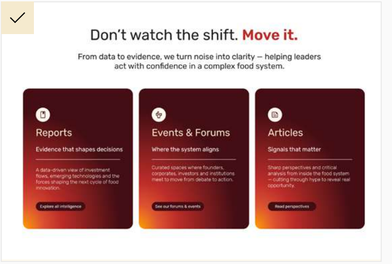

Outside the uses included in this guide, any other chromatic combination applied to typography is prohibited.

EAV Black text on white or cream background.

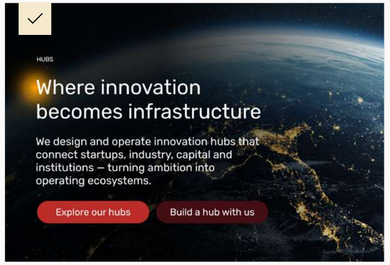

Bold highlighted word in red only in headlines.

Cream headlines and white body text on red gradients.

Cream text on burgundy background.

White text over photography.

Cream or white text over photography and light point.

© 2026. All rights reserved.

Correct writing of brand names

To maintain verbal consistency across all touchpoints, the main names and expressions of Eatable Adventures must always be written in the same way.
These rules apply to decks, web, documents, commercial pieces, proprietary products and any written brand communication.

Eatable Adventures

When the brand name is written in running text, the correct form is Eatable Adventures, **with initial capitals on E and A.**

The Beating Heart of Food Innovation

The positioning must be written as The Beating Heart of Food Innovation, **with an initial capital on each word except “of,” which remains lowercase.**

Let’s Beat

When written in body text, the correct form is Let’s Beat, **with the correct apostrophe and initial capitals on both words.**

© 2026. All rights reserved.

8. Photography

Brand Guidelines — Soul

© 2026. All rights reserved.

Back to index

Role of photography

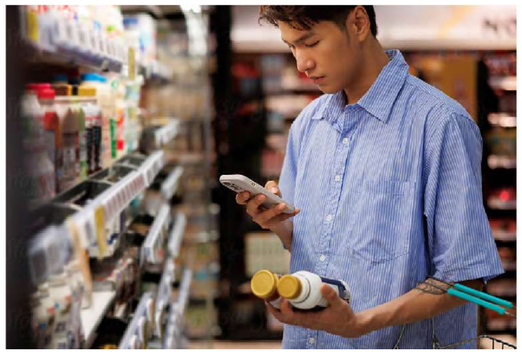

Photography in Eatable Adventures does not serve a decorative function. Its role is to build trust, context and relevance, showing the brand inside the real food innovation system. It must reflect Eatable as an actor that connects and activates a complete ecosystem where science, industry, agriculture, technology, business and investment coexist.

That is why **the brand's photography is necessarily diverse: it speaks to startups, corporates, governments and investors, while also showing Eatable articulating that value chain.** Every image should help explain that the brand does not operate in a single visual territory, but inside a broad, dynamic and interconnected system.

© 2026. All rights reserved.

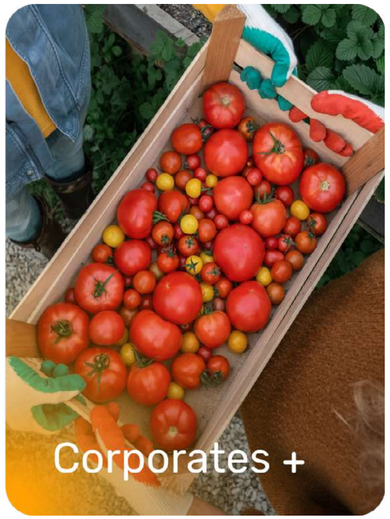

Selection criteria

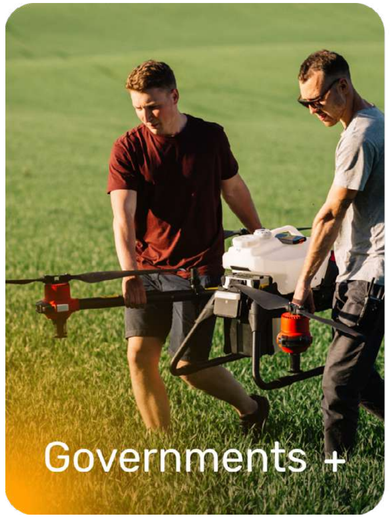

Photo selection must always respond to the communication context and the audience the piece is targeting. Not all images serve the same function: some must reinforce technical credibility, others show scale, others activate human closeness or signal opportunity.

As a general rule, Eatable photographs should always show action.
People do not appear posing statically, but doing something: researching, producing, observing, conversing, validating, touring, collaborating or making decisions. This idea of movement is key to reinforcing a brand defined by its ability to activate the system.

> Images should feel authentic, warm or neutral, with natural light and no artificial effects. They should avoid the feeling of generic stock, advertising-like acting or cold technological imagery disconnected from the food system.

© 2026. All rights reserved.

Types of photography

The Eatable Adventures photographic system is organized into two main types: **detail photography and wide shots with people in action.** Both coexist within the system and are used depending on the message, the audience and the level of context the piece needs to show.

The first brings the gaze closer to the gesture, process or material; the second opens the frame to show people, environment, the relationship between actors and operational context. Together, they build a more complete vision of the ecosystem that moves Eatable.

DETAIL SHOT

WIDE SHOT

© 2026. All rights reserved.

Curated image bank

Most images may come from stock libraries, but **the curated image bank already selected by Eatable should always be prioritized.** This helps maintain aesthetic and conceptual continuity between decks, web, proprietary products and cross-brand communication.

The criterion should not be based only on whether an image “looks good,” but on whether it truly belongs to Eatable’s visual universe and reinforces the type of system the brand needs to show.

© 2026. All rights reserved.

Photography and visual system

Photography can be used in four ways: **clean, with a light point, integrated gradient or impact filter.** In all cases, the graphic resource must reinforce the image, not compete with it or cover important information in the image.

Clean photography

Clean photography is used when the image should speak for itself and provide real context without graphic intervention.

Light point next to headline

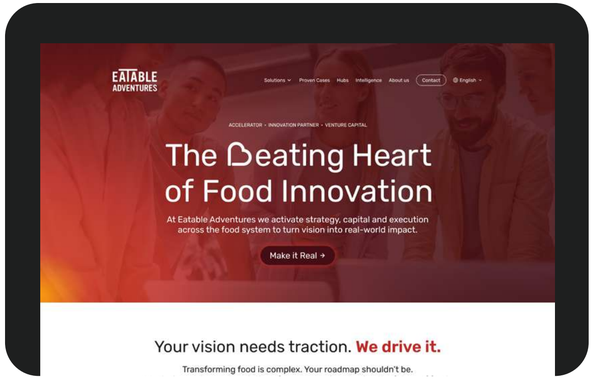

Used **only when there is a headline integrated into the photograph**, and it serves to highlight the message.

Integrated gradient

Helps incorporate the image into the Eatable Adventures visual system.

Impact filter over photography

Used only in **headers, banners or hero sections**, with 85 % opacity and always in a controlled way.

© 2026. All rights reserved.

Summary

DO	DON'T
Choose images that respond to the message and the audience of the piece.	Do not choose images just because they "look good" if they do not provide context.
Prioritize real scenes linked to the food system: industry, laboratory, agriculture, technology, business and investment.	Do not use static, posed photos or images that feel advertising-like.
Show people in action, interaction or decision-making.	Do not select generic stock images with no clear link to food innovation.
Look for images that reinforce the idea of ecosystem and movement.	Do not use cold or technological photography if it disconnects the brand from its human and operational dimension.
Maintain a warm or neutral visual temperature and a sense of authenticity.	Do not use overly dramatic photos with unrealistic lighting.
Prioritize the brand's curated image bank when available.	Do not forget which sector or audience the piece is speaking to.

© 2026. All rights reserved.

9. Graphic elements

Brand Guidelines — Soul

© 2026. All rights reserved.

What graphic elements are

Eatable Adventures' graphic elements **are responsible for visually translating the positioning The Beating Heart of Food Innovation and function as one of the brand's main guiding threads.** They represent Eatable's heartbeat in the form of light: a light that activates like a pulse, expands, reproduces and impacts everything it touches. Through it, the graphic devices build movement, hierarchy and character within the visual system. They do not function as decorative backgrounds, but as a graphic layer in service of the message.

© 2026. All rights reserved.

Types of graphic elements: Main

Eatable Adventures' primary and secondary graphic elements are governed by three main behaviors: Pulse, Rhythm and Impact. **From them, the most representative expressions of the visual system are built,** as well as complementary variations that enrich it and allow it to adapt to different application contexts.
In all cases, their function is the same: to visually translate the brand's heartbeat.

PRIMARY GRAPHIC ELEMENTS

Born from EAV Red.

SECONDARY GRAPHIC ELEMENTS

Born from EAV Cream.

© 2026. All rights reserved.

Types of graphic elements: Specific

Alongside the system's main graphic elements, Eatable Adventures has two specific resources: the Light Point and Let's Beat. The first activates and directs the eye; the second introduces a warmer and more expressive closing element. Both complement the brand's visual language without replacing the main logic of Pulse, Rhythm and Impact.

Their function is to provide focus, nuance and character at specific moments in the composition. They do not structure the system on their own, but they enrich it and help make it more flexible, recognizable and adaptable to different touchpoints.

LIGHT POINT

A unique expression of Pulse, born from EAV Yellow.

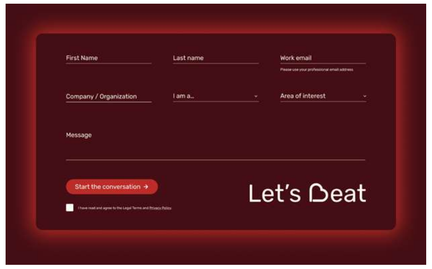

LET'S BEAT

A closing typographic resource.

© 2026. All rights reserved.

Primary graphic elements

Primary graphic elements **bring together the most representative expressions of the Eatable Adventures visual system.** They are born from EAV Red and build the brand's most recognizable layer through the behaviors of Pulse, Rhythm and Impact.

They are the resources that should be used most often when the piece needs a clear brand presence, especially on covers, hero sections, high-positioning headlines, data, closing pages or moments where the visual system needs to gain prominence.

PRIMARY GRAPHIC ELEMENTS

DOWNLOAD

PULSE

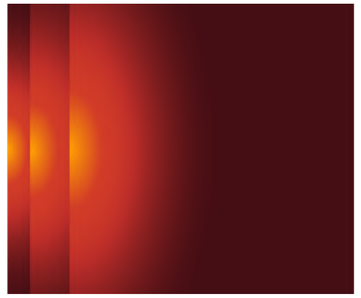

Main and unique in its category. It has no variants.

Rule for using graphic elements
They should be the first option when the piece needs intensity, identity and a visual expression clearly associated with Eatable Adventures.

RHYTHM

Main expression of its category.

RHYTHM

Variant expression. Used when accompanying photography.

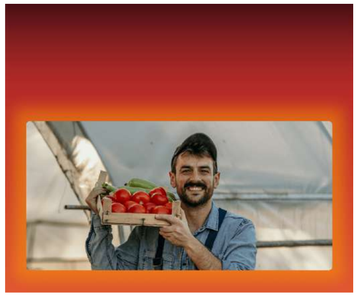

IMPACT

Main expression of its category.

IMPACT

Variant expression. Used when accompanying photography.

© 2026. All rights reserved.

Secondary graphic elements

Secondary graphic elements expand the Eatable Adventures visual system through cream gradients. They respond to the same Pulse, Rhythm and Impact behaviors, but with a softer intensity, designed to introduce pauses, balance and variation in pieces where the red load of the main system would be excessive, such as proprietary products, landing pages or consulting materials.

They do not replace primary graphic elements; they complement and enrich them.

SECONDARY GRAPHIC ELEMENTS

DOWNLOAD

PULSE

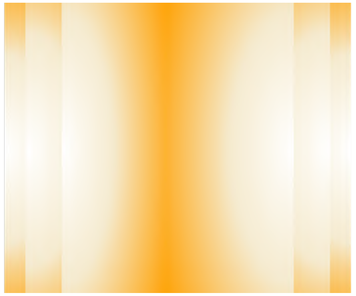

Main and unique in its category. It has no variants.

Rule for using graphic elements
They should be used as support or visual pause, never as a replacement for the main system in pieces where the brand needs stronger presence.

RHYTHM

Main expression of its category.

RHYTHM

Variant expression. Used when accompanying photography.

IMPACT

Main expression of its category.

IMPACT

Variant expression.

Back to index

Primary and secondary graphic elements

Incorrect uses

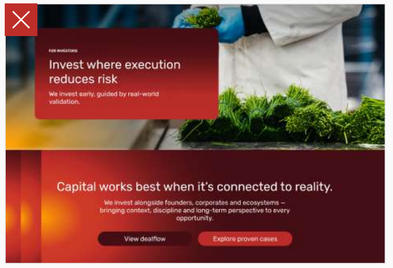

Unlike the Light Point and Let's Beat, the primary and secondary graphic elements of Eatable Adventures are closed resources within the visual system. They do not function as free positioning elements and do not allow open compositions or reinterpretations. The approved graphic elements are only those that exist in this guide; therefore, any new construction, variation or composition outside them must be considered incorrect use.

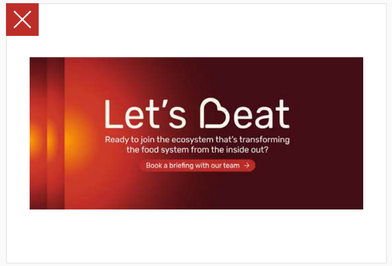

Do not build new gradients outside those explained in this guide.

Do not apply gradients as a photography filter if they are not approved.

Do not use graphic elements consecutively without visual pauses.

Do not use a behavior different from the one defined for the communication, for example a CTA with a rhythm gradient.

Do not use secondary graphic elements with greater prominence than primary ones as the main brand communication.

Do not alter the composition, direction or proportion of existing graphic elements.

© 2026. All rights reserved.

Light Point

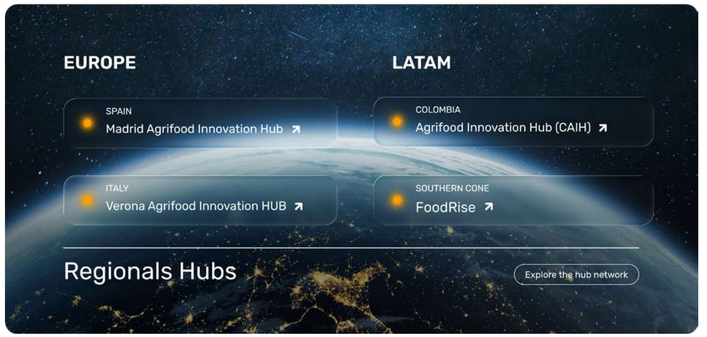

The Light Point is one of the most distinctive resources in the Eatable Adventures visual system. It is built from EAV Yellow and functions as a specific expression of Pulse, used to visually activate a specific point within the composition.

Its main use is to direct the eye toward a specific area of the piece, either as a highlight in photography corners or as an accent next to a headline, data point or call to action. Unlike other graphic elements, the Light Point acts in a targeted way and not as an expanded presence within the layout.

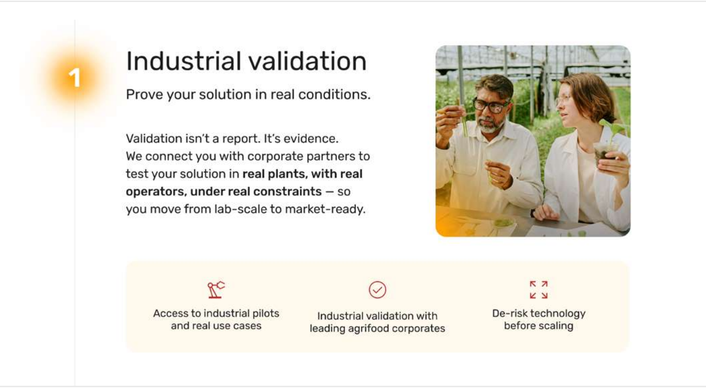

It must be used with precision and moderation, always in service of the piece's visual focus.

LIGHT POINT

DOWNLOAD

Rule for using the Light Point
The Light Point should activate, not decorate. Its function is to signal, accompany or emphasize, never to compete with the main content. It may only be used over white, cream or photography.

© 2026. All rights reserved.

Back to index

Light Point

Incorrect uses

The Light Point must always be used with precision and control, since its value within the system depends on functioning as a punctual accent and not as a decorative effect.
It must be applied with intention within the composition, avoiding repetitive, invasive uses or uses without a clear visual-focus function.

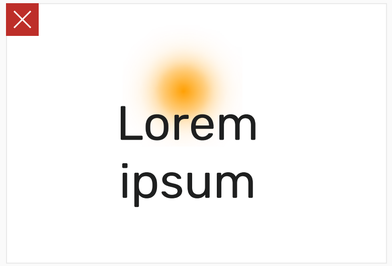

Do not use the Light Point in photographs in any corner other than the lower left.

Do not mix several hero behaviors within the same composition.

Do not place it over faces or important information in a photograph.

Do not use it centered with headlines.

Do not use it over colors other than white, cream or photography.

Do not use it in colors outside EAV Yellow.

© 2026. All rights reserved.

Let’s Beat

Let’s Beat is a specific typographic graphic element for calls to action within the Eatable Adventures visual system. Its construction is based on Rubik typography and incorporates the same modified B that appears in The Beating Heart of Food Innovation.

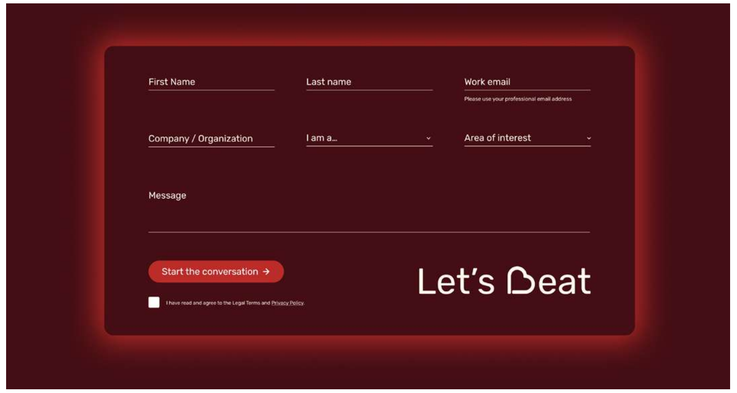

Its function is to introduce a warmer, more direct and friendlier tone at specific moments in communication, especially in closings of commercial pieces, contact forms or merchandising applications.

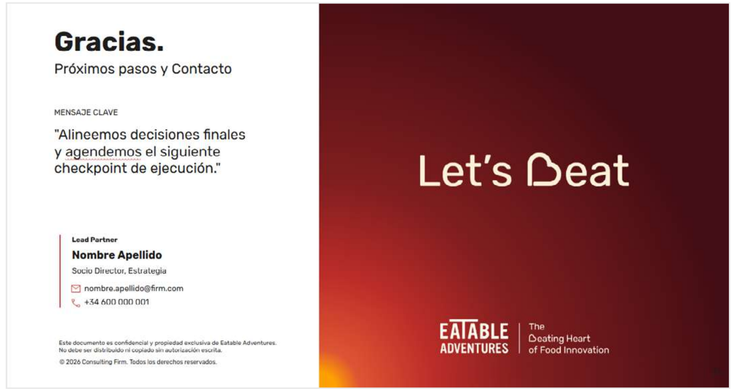

Rule for using Let’s Beat
It should be used as a punctual activation resource and not as a substitute for the claim.

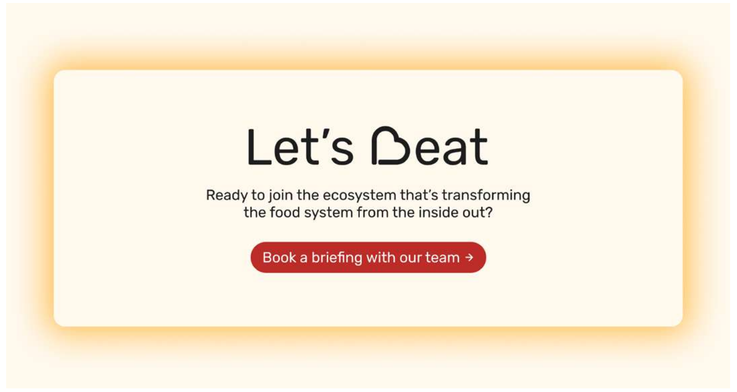

LET’S BEAT

DOWNLOAD

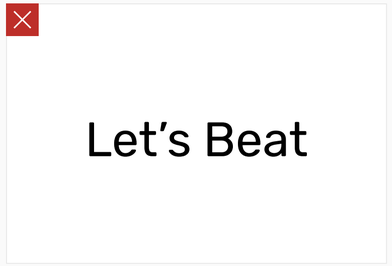

© 2026. All rights reserved.

Back to index

Let’s Beat

Incorrect uses

Let’s Beat is a punctual typographic resource of the system and not a substitute for the claim, the logo or the brand’s functional calls to action. It must be used intentionally, at specific activation moments, and always from its official file.

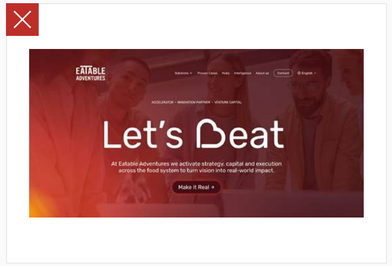

Do not rebuild it manually with Rubik typography to use it as a graphic element.

Do not change the color of the modified B to highlight it.

Do not change its composition, proportions or spacing.

Do not use it as a brand claim or positioning.

Do not take the modified B out of context to use it independently.

Do not create patterns with Let’s Beat.

© 2026. All rights reserved.

Role of each graphic element: When to use them

Within the Eatable Adventures visual system, each resource serves a different function and must be chosen according to the role it has within the piece. When implementing these graphic elements, it is useful to always ask three questions:

- which audience will receive the piece?,
- what type of application is it?,
- what level of brand intensity does it need?

As a general rule, it is not about using more resources, but about choosing the right one according to the intention of the piece and its context of use.

USE OF EACH TYPE OF GRAPHIC ELEMENT

Pulse: used for calls to action or activation: invite, download, register, contact or join.

Rhythm: used when the piece shows that Eatable is moving the system: programs, actions, reports, networks, activity or work in progress.

Impact: used when the piece shows the change already produced: results, cases, transformation or proof of value. It is also the main graphic element when the logo is shown, because Eatable is the agent of change.

Light Point: used to highlight a headline or featured message.

Let's Beat: used only as a closing element, when the aim is to finish with a call to action or a warmer tone.

© 2026. All rights reserved.

Construction of graphic elements

1. Main primary elements

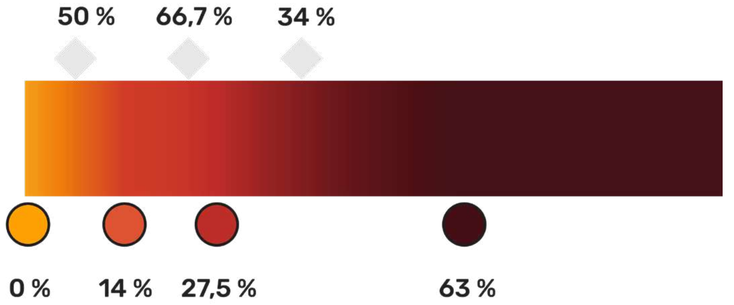

Eatable Adventures' primary graphic elements are built from EAV Yellow, EAV Orange, EAV Red and EAV Burgundy.

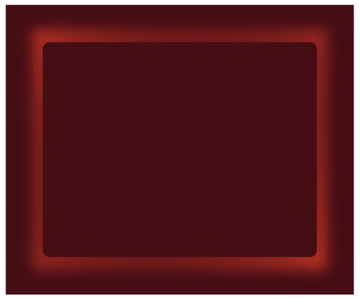

From this combination come the main expressions of Pulse, Rhythm and Impact, which make up the most representative and recognizable layer of the visual system.

Whenever possible, the official files already created should be used instead of recreating the resources manually.

Build the base gradient:

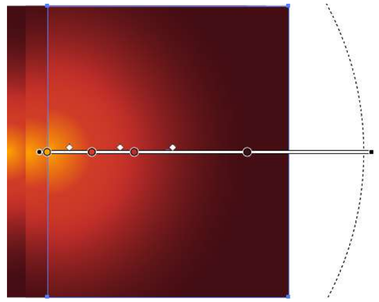

- Type: Radial.
- All colors at 100 % opacity.

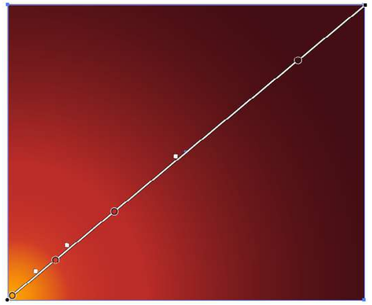

Pill of the same color as the background, with parallel shadow:

- Opacity: 75 %.
- Distance: 0 px.
- X and Y offset: 0 px.

It is built from the left side by superimposing the same gradient three times. Altogether, its repetition should not occupy more than one third of the piece.

It is built from the lower-left corner and the diagonal ends in the upper-right corner.

© 2026. All rights reserved.

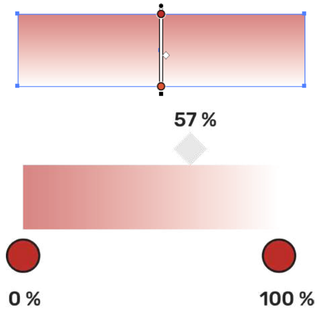

Construction of graphic elements

1. Primary variants

Primary variant gradients expand the Eatable Adventures visual system with specific compositions. Although they belong to the same graphic language as the main gradient, they do not start from its exact construction nor derive from it 100%. Each one has its own composition, proportion and way of being applied within the layout, responding to specific visual needs without leaving the general logic of the system.

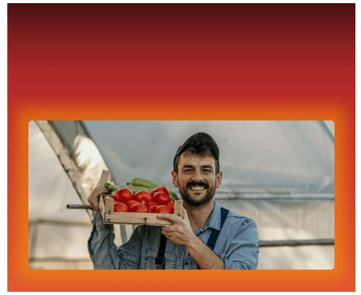

Whenever possible, the official files already created should be used instead of recreating the resources manually.

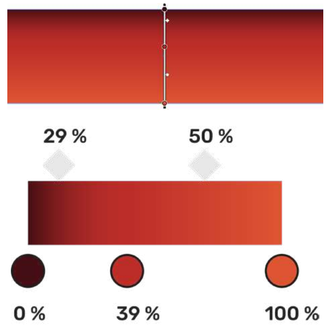

Vertical linear gradient built from EAV Red.

It is composed by superimposing two strips of the same gradient, each with 57 % opacity. Its application always goes from top to bottom.

This composition starts from a vertical linear gradient **that does not include EAV Yellow within its own mix.**

Yellow is incorporated separately, through a rectangle placed beneath the photograph and treated with Gaussian blur, to generate the light point in a controlled way.

© 2026. All rights reserved.

Construction of graphic elements

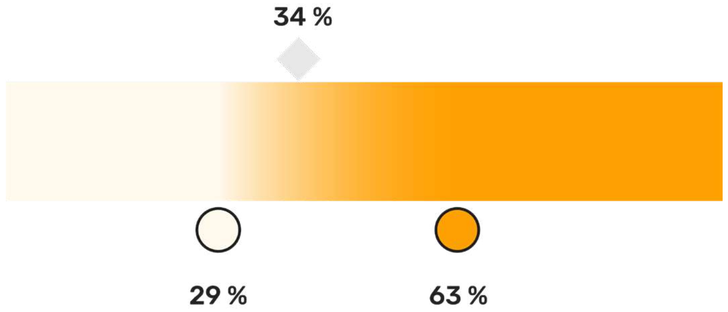

2. Main secondary elements

Eatable Adventures' secondary graphic elements come from the cream system and reproduce the same Pulse, Rhythm and Impact behaviors with a softer and more restrained intensity. Their function is to expand the system with a lighter expression, designed for pieces where the red load of the main system would be excessive.

Whenever possible, the official files already created should be used instead of recreating the resources manually.

Build the base gradient:

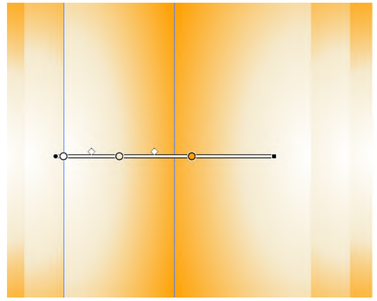

- Type: Radial.
- All colors at 100 % opacity.

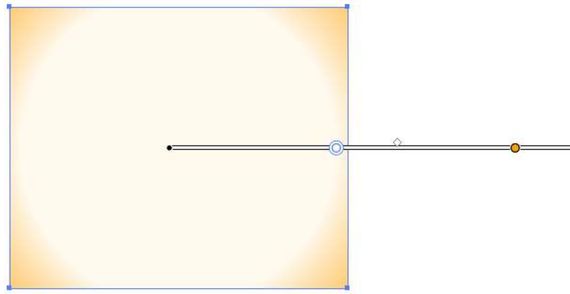

Pill of the same color as the background, with parallel shadow:

- Opacity: 75 %.
- Distance: 0 px.
- X and Y offset: 0 px.

From the base gradient, EAV Dark Cream is incorporated as a central color transition. Repetitions follow the same logic as the primary Rhythm graphic element.

It is built from the center of the piece horizontally, making the gradient radius protrude beyond the format to bring the darker tones toward the corners.

© 2026. All rights reserved.

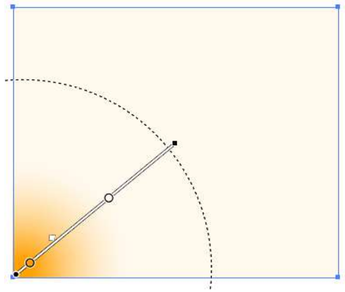

Construction of graphic elements

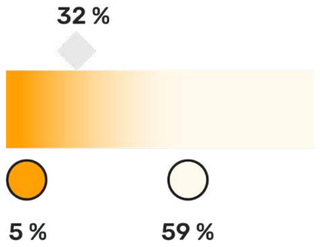

2. Secondary variants

Secondary variant graphic elements expand the cream system with specific compositions. Although they share the same restrained logic as the main secondary graphic elements, each one has its own construction depending on the needs of the piece.
Their function is to introduce variety, pause and visual richness without increasing the intensity of the system or moving outside its language.

Cream EAV solid background pill with rounded corners and outer parallel shadow in EAV Yellow at 50 % opacity, with no offset.
Centered photography with the same radius criterion and a second parallel shadow, also with no offset.

This composition starts from the base gradient, readjusting the position of its colors. It is built from the lower-left corner and projects diagonally toward the center of the piece.

Whenever possible, the official files already created should be used instead of recreating the resources manually.

© 2026. All rights reserved.

Construction of graphic elements

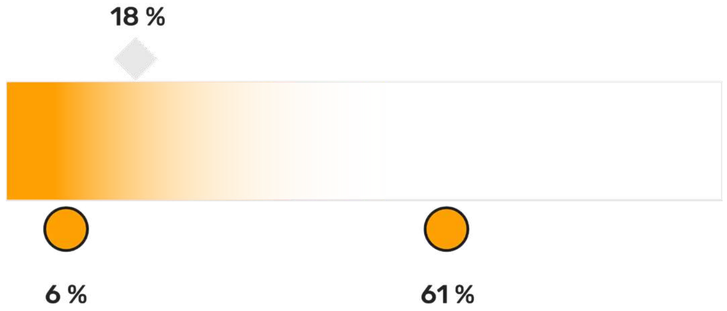

3. Light Point

The Light Point is built from EAV Yellow and functions as a punctual focus within the composition. It is applied through a parallel shadow or halo with no offset, with a soft diffusion that allows the light to expand without generating hard edges.
Its function is to direct the eye toward a headline, photograph, data point or call to action, so it must always be used in a restrained and precise way.

Whenever possible, the official files already created should be used instead of recreating the resources manually.

Build the base gradient:

- Type: Radial.
- EAV Yellow goes from 100 % to 0 % opacity.

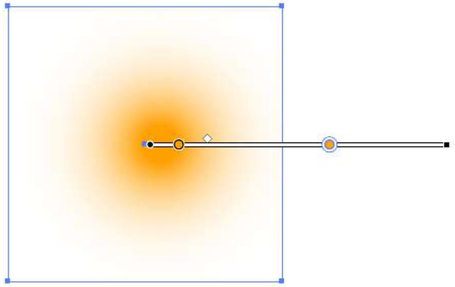

Starting from the base gradient, the Light Point is applied over the photograph diagonally, from the lower-left corner toward the upper-right. Its path may be shortened before reaching the end if the image's legibility or color requires it.

Next to headlines, the Light Point is placed at the start of the text, centered at half the height of the capital letter and with a height proportional to it. The letter is superimposed over the point, which should protrude approximately two thirds to the left.

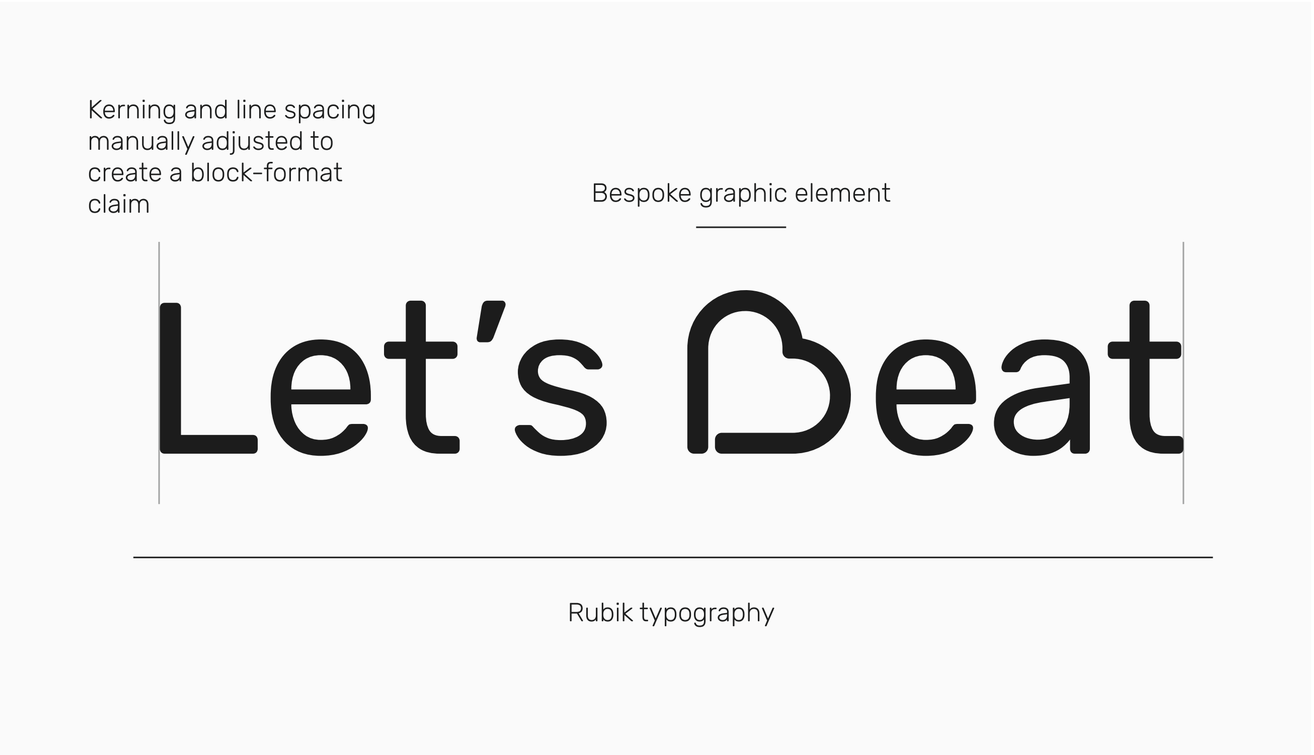

The Light Point is built so that the focus is concentrated in one specific point and the diffusion opens progressively within the composition.

© 2026. All rights reserved.

Construction of graphic elements

4. Let’s Beat

Because of its specific construction, Let’s Beat must not be rebuilt, rewritten or manually composed using the typeface. Its kerning, proportions or visual behavior must not be modified either.
Whenever it is used as a brand graphic element, only its official files must be used.

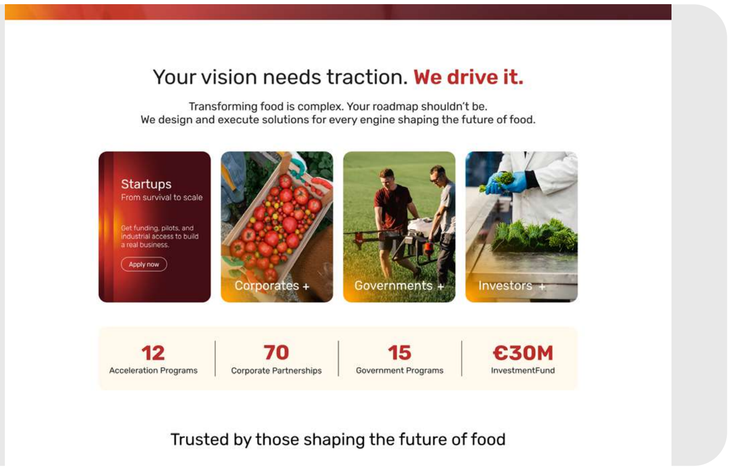

© 2026. All rights reserved.

Composition criteria

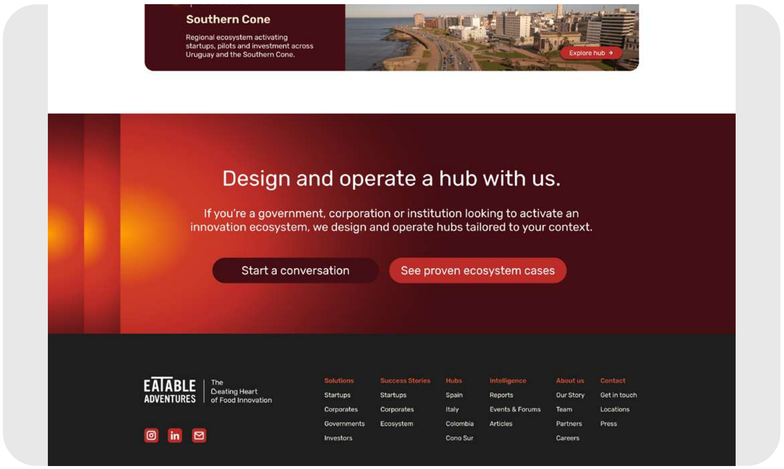

These considerations explain how graphic elements should be applied within a real composition. Their aim is to maintain balance, legibility and visual control across all brand touchpoints.

Graphic element occupation on screen

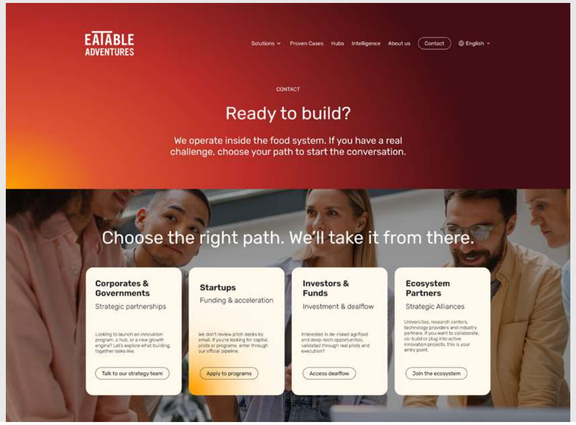

As a general rule, **a graphic element should not occupy more than 40–50 % of the visible composition** without introducing a visual pause. There must always be an area of white, cream or photography between gradients.

Text over gradient

Text should only be placed over a gradient **when the base guarantees enough contrast and clear readability.** If this does not happen, a cleaner area must be introduced within the composition.

Use of primary and secondary elements

Primary and secondary graphic elements can coexist in the same piece only when the composition clearly justifies it. This usually happens where a block needs a pause within a main red system.

© 2026. All rights reserved.

10. Iconography

Brand Guidelines — Soul

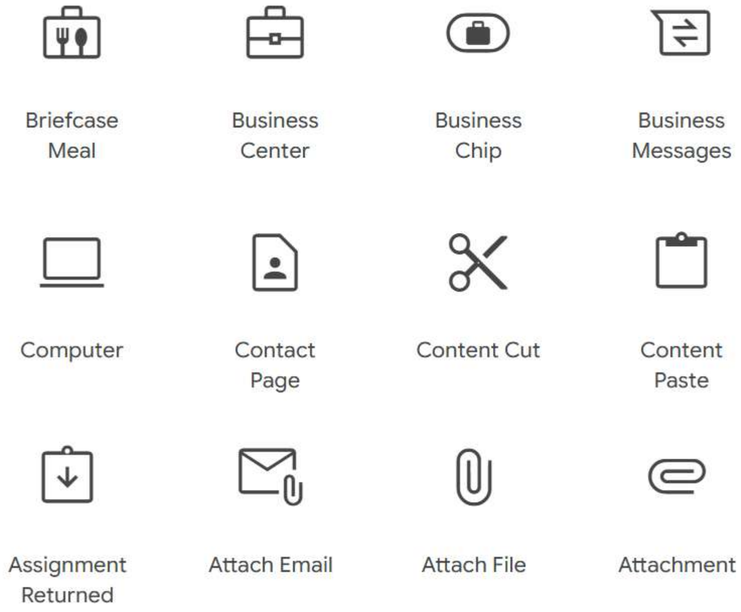

© 2026. All rights reserved.

Icon library

To facilitate coherent communication among all team members, Eatable Adventures uses **Google Fonts** icons as its base iconography system. This decision makes it possible to work with a broad, accessible and easy-to-implement resource from anywhere, ensuring consistency across teams, documents and media.

Eatable Adventures icons should be used only when strictly necessary to expand, clarify or support an idea. Their use should always be moderate: they should not be large, should not become protagonists of the composition and should never compete with the main content.

They are used more frequently in consulting decks, functional materials or pieces where they help organize information clearly. Within the visual system, icons play a supporting role, not a brand-expression role.

GO TO LIBRARY

Google Fonts - Icons

© 2026. All rights reserved.

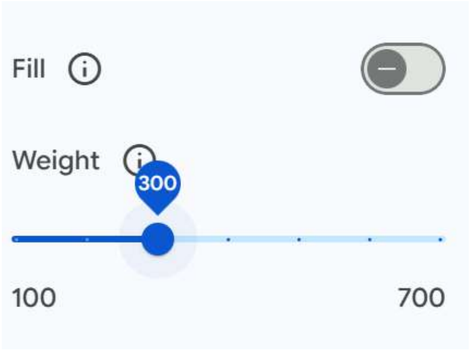

Icon download guide

Before downloading any icon, it is important to check in the filters that the parameters are correctly configured to maintain system coherence. These settings ensure a light, clean and consistent appearance across all brand applications. These values should not be modified unless there is a very specific and approved technical need.

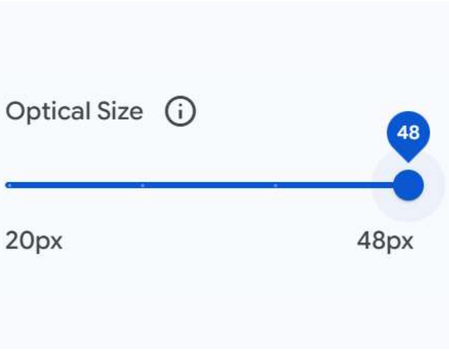

GO TO LIBRARY

Google Fonts - Icons

Eatable Adventures icons must always be used in **outline,** with **Weight 300, Grade 0** and **Optical Size 48.**

© 2026. All rights reserved.

Use of icons

Eatable Adventures icons must always be used as functional support for information, placed near the content they introduce and keeping a secondary scale in relation to the text. They should not appear isolated or become hero or decorative elements.

General rule

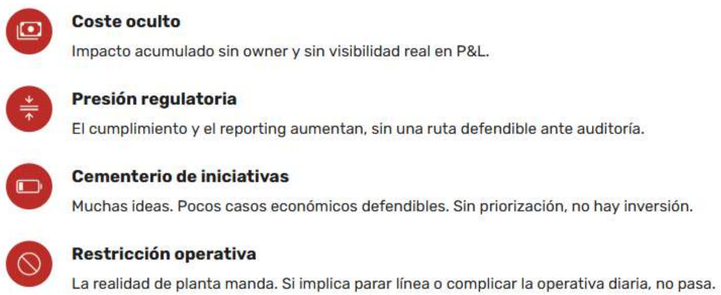

When the composition is clean or subtle enough, the icon can sit inside a solid-color circle to reinforce its presence and better organize the block. This resource should be used moderately and only when it does not compete with the main information.

Cards

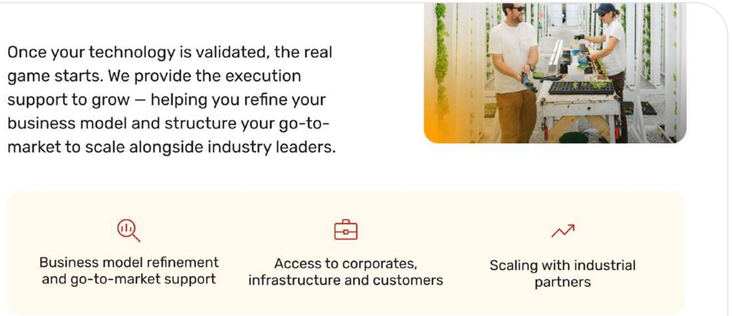

The icon is preferably placed at the top left. It can sit directly on the card or inside a solid-color circle if the composition allows it.

Lists

The icon functions as a visual marker and is placed at the beginning of each item, aligned with the text.

Horizontal blocks

The icon can be centered above the text when it is part of a pill or horizontal module with a repeated structure.

© 2026. All rights reserved.

11. Layout

Brand Guidelines — Soul

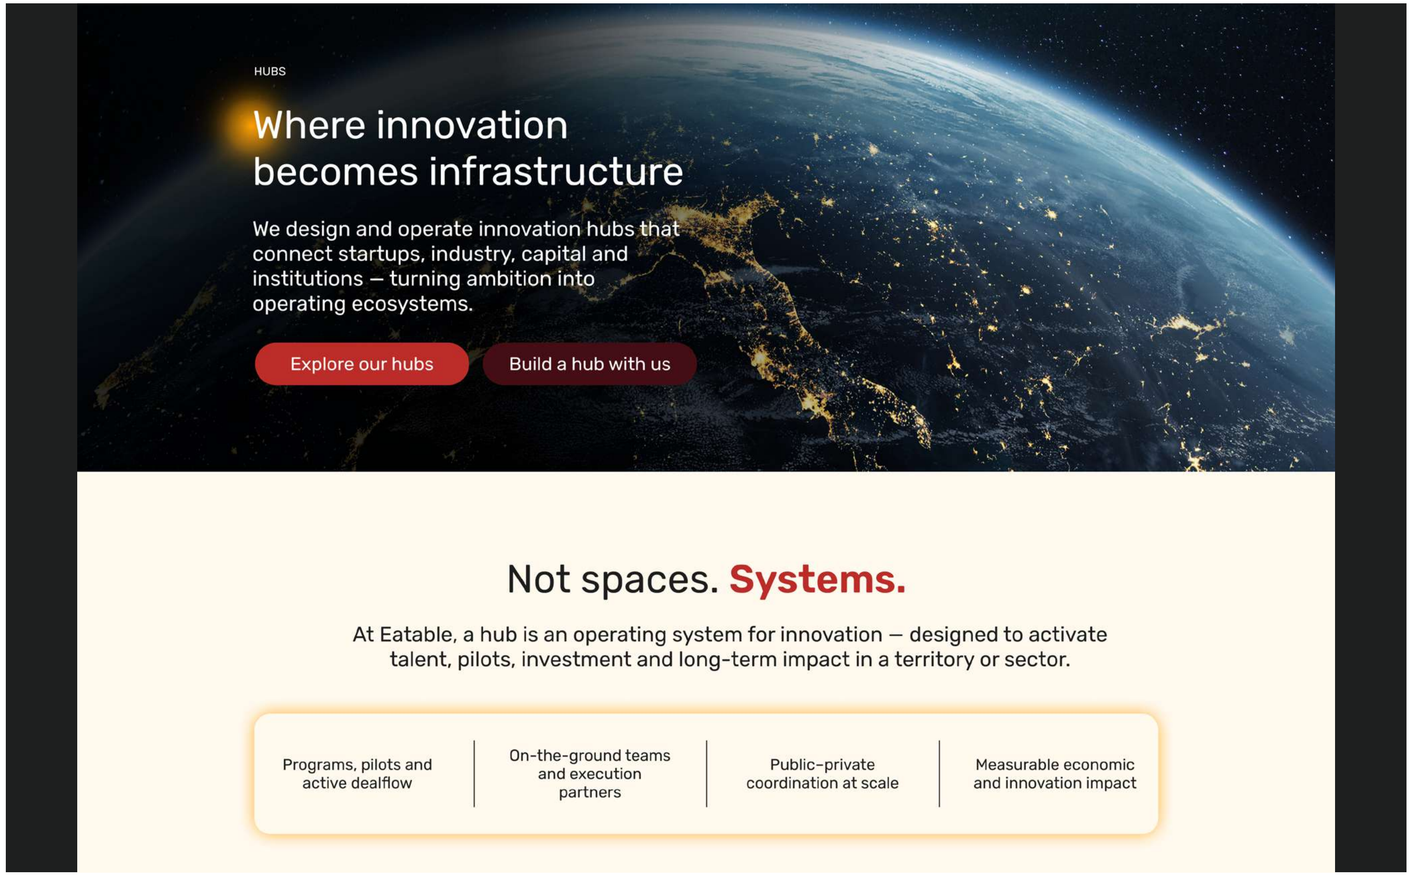

© 2026. All rights reserved.

Layout principles

Eatable Adventures layouts must organize information in a clear, modular and easy-to-read way. Each page must have an evident hierarchy: what is read first, what accompanies it and what functions as visual support.

The system relies on consistent margins, flexible grids, well-separated blocks, enough air and cards or content boxes. The latter are a key resource for structuring information, highlighting ideas and building more ordered compositions without losing dynamism.

The composition may be more functional or more expressive depending on the type of piece, but it must always maintain order, intention and balance. Every element - headline, text, image, card, icon, chart or graphic device - must have a clear function within the page.

© 2026. All rights reserved.

Back to index

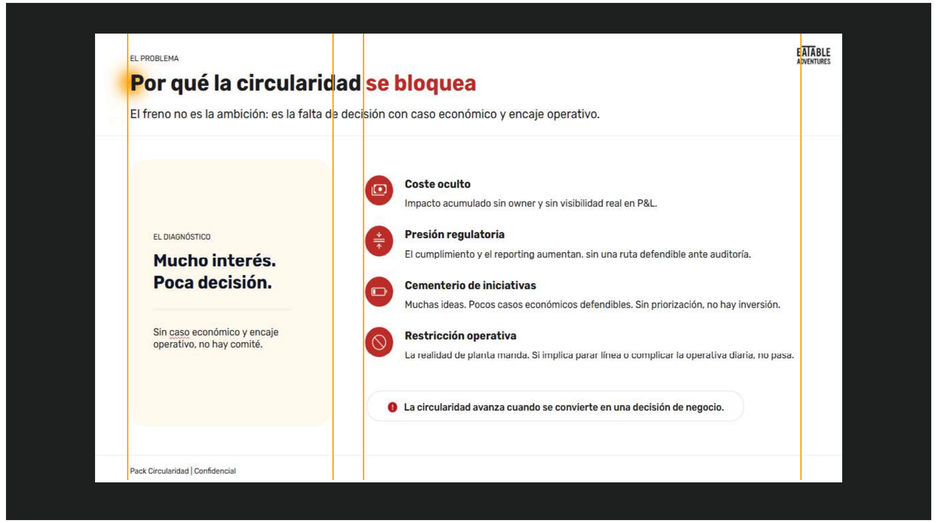

Grid and columns

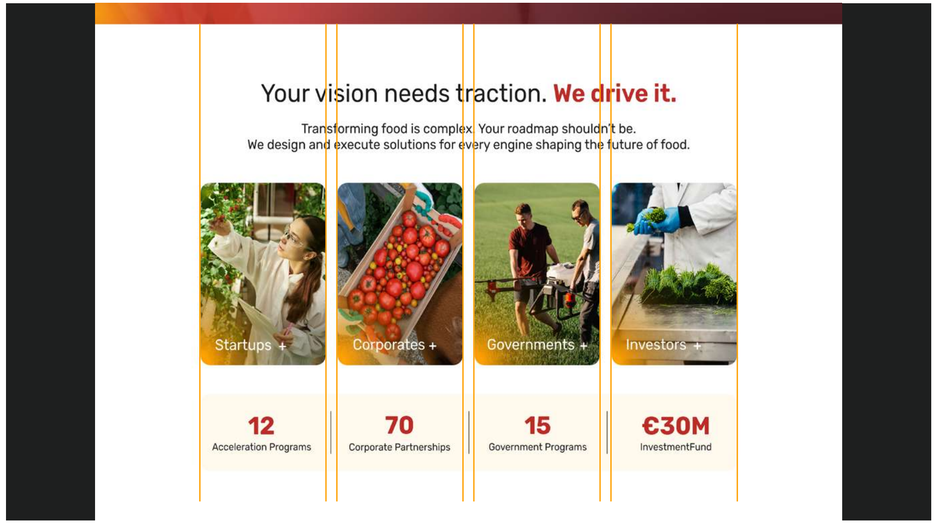

Eatable Adventures' grid is flexible and can adapt to the format and amount of content. Depending on available space, the composition can be organized into 1 to 4 columns.

The most common structures are:

- **1 column:** single hero block.
- **2 columns:** 1/1 or 1/3 distribution, depending on the hierarchy between text and image.
- **3 columns:** 1/1/1 distribution for equivalent modules.
- **4 columns:** 1/1/1/1 or 2/2 distribution for card systems, phases or comparisons.

The choice of columns must always respond to the hierarchy of the content, not to an automatic division of space.

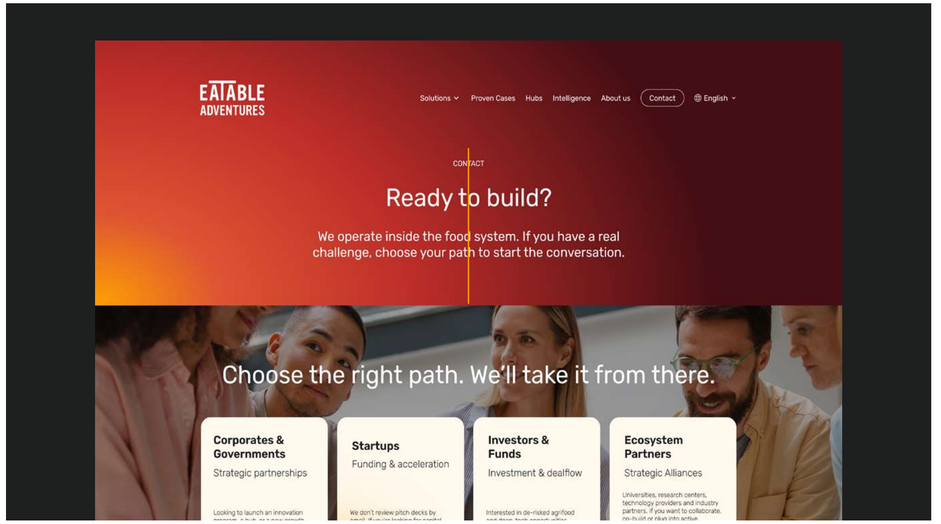

© 2026. All rights reserved.

Text alignment

As a general rule, paragraphs are always left-aligned. They may only be centered when they function as a short hero block within the composition, as occurs on covers, transition slides or section headers on the web. Headlines can be left-aligned or centered depending on the structure of the piece, but paragraphs must never be justified, to avoid rivers in the text block.

Eyebrows are always placed above the headline. On centered divider slides or headers without image, they can be centered together with the headline; on covers, divider slides or compositions with a side graphic device or photography, they should be left-aligned together with the main headline.

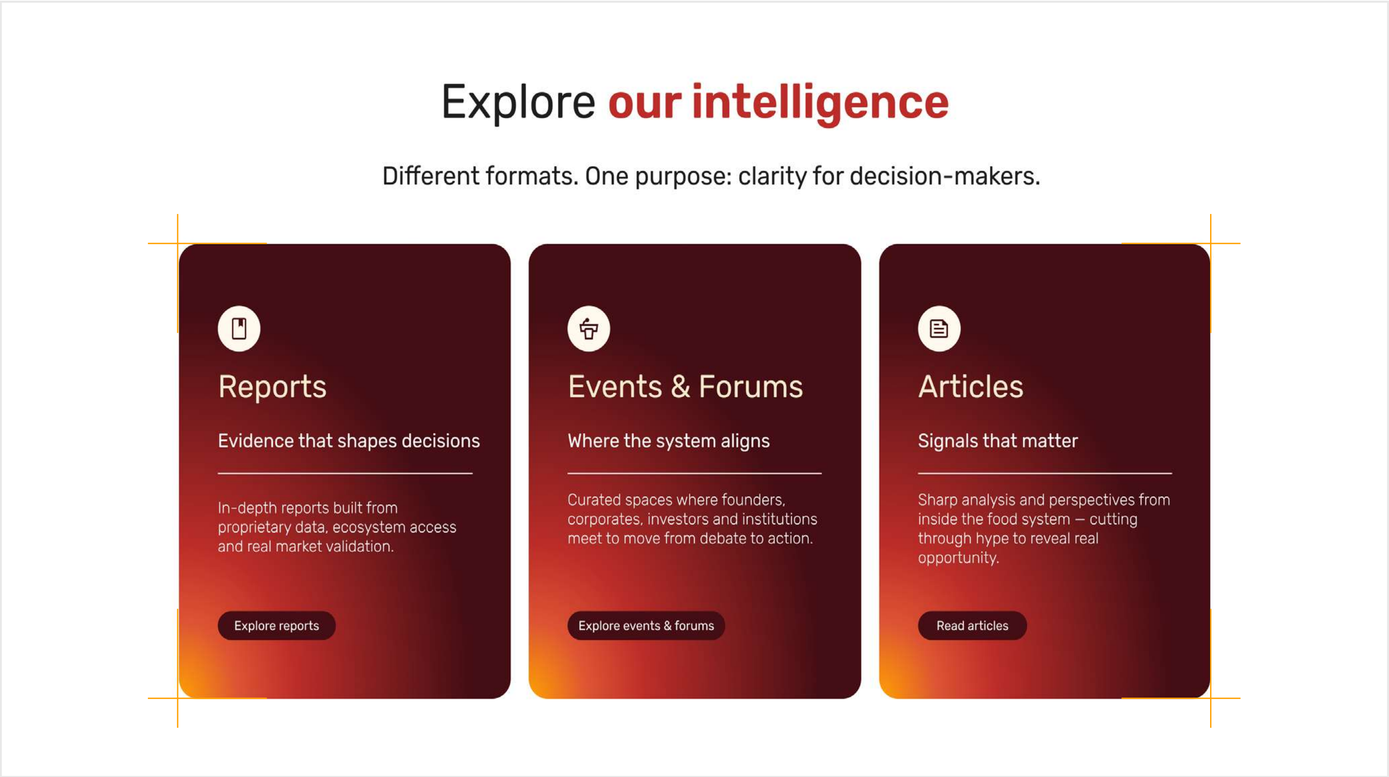

© 2026. All rights reserved.

Cards, boxes and floating modules

Cards, boxes and floating modules must use rounded corners whenever they do not touch the edges of the format or bleed off the page. This rule applies to highlighted blocks, information boxes, modules with icons, lists inside a pill, product cards and any independent frame within a composition.

When the block reaches the edge of the medium, functions as a full-width band or bleeds off the page, rounding may not be applied.

© 2026. All rights reserved.

Color in cards and boxes

The color of cards and boxes must respond to the type of piece and the level of brand intensity.

EAV Cream is used for highlighted blocks in brand-positioning pieces. In decks, it is used for conclusions or important texts.

EAV Grey is reserved for blocks in consulting materials, where communication needs a more neutral and functional tone.

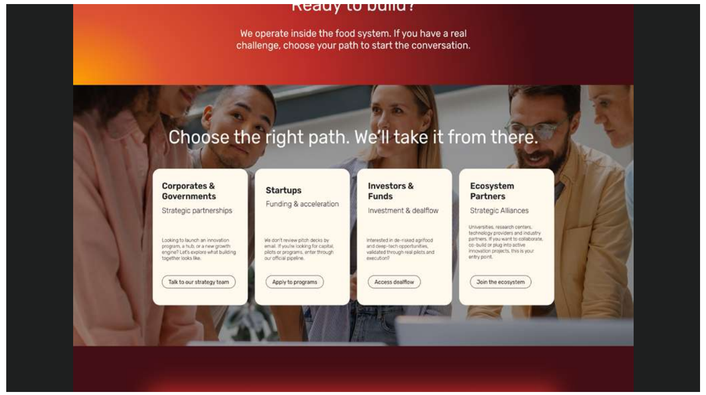

Rhythm or Impact gradients may be used in cards only in commercial or brand-positioning pieces, provided the context justifies it and does not make reading difficult. They should not be applied by default or in pieces with high information density.

Cream - Important text in deck

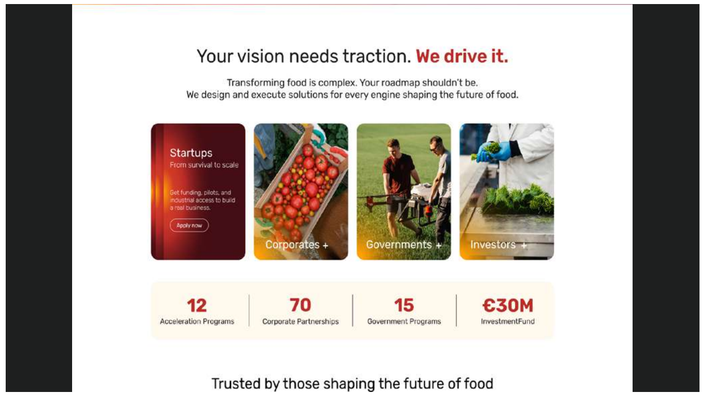

Grey - Highlight in consulting

Cream - Highlighted block in brand piece

Rhythm gradient - Brand piece

© 2026. All rights reserved.

12. Templates

Brand Guidelines — Soul

© 2026. All rights reserved.

Deck templates

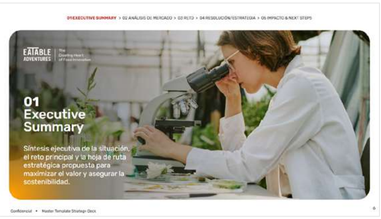

Eatable Adventures has presentation templates already developed for different communication tones and objectives: **consulting, sales, corporate communication and proprietary product.**

Each one responds to a different level of brand expression and already has its grid, covers, back covers, divider slides, graphic resources and composition criteria defined.

Before creating a new presentation, the type of piece, the audience and the communication objective must be identified. From there, the corresponding existing template should be used instead of building a deck from scratch. **When there are doubts about which template to apply, guidance should be requested from the responsible team.**

CONSULTING

SALES

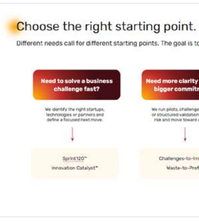

CORPORATE

PROPRIETARY PRODUCT

© 2026. All rights reserved.

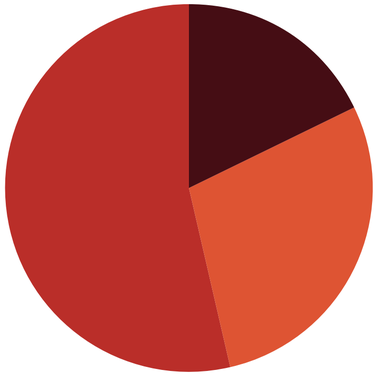

13. Charts and data visualization

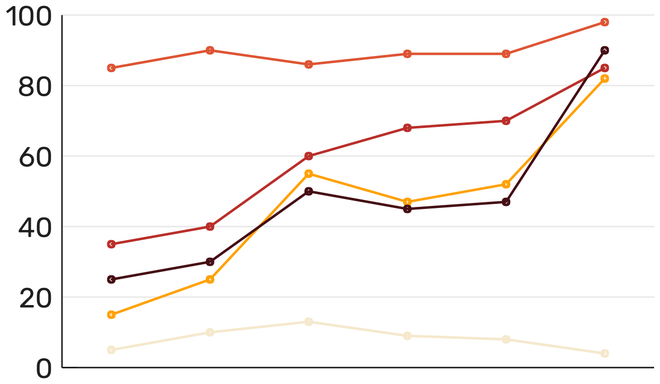

Brand Guidelines — Soul

© 2026. All rights reserved.

Functional charts

Eatable Adventures charts follow a fixed color hierarchy, regardless of the type of chart or amount of data. Color is assigned by relevance, not decoratively.

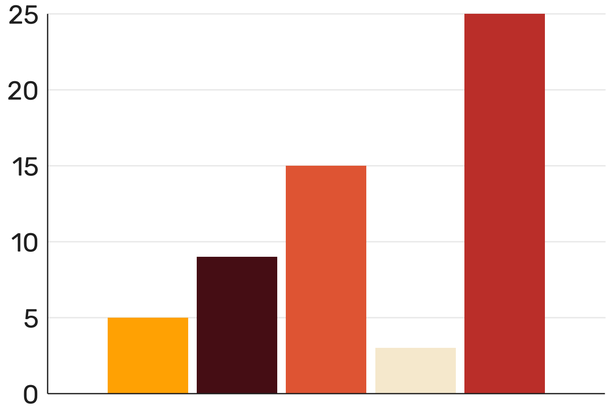

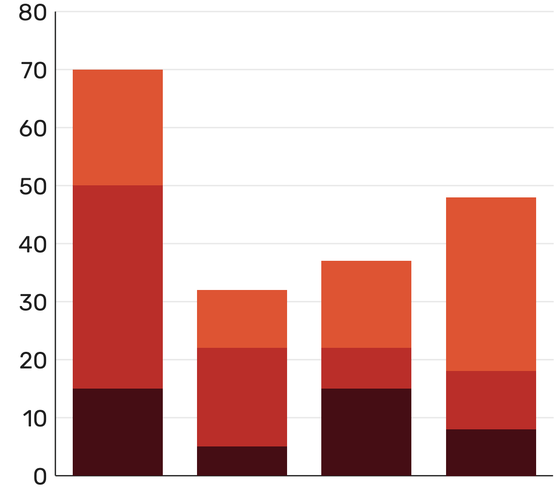

The recommended order is:

- **EAV Red:** main or most relevant data point.
- **EAV Orange:** second most relevant data point.
- **EAV Burgundy:** third data point or high-weight support variable.
- **EAV Yellow:** fourth data point or secondary information.
- **EAV Dark Cream:** fifth data point or secondary support.
- **EAV Grey:** neutral or complementary data.
- **EAV Black:** occasional use, axes, text or reference elements.

This logic must be applied in pie charts, bars, lines, comparisons or any data visualization to order reading and quickly highlight key information.

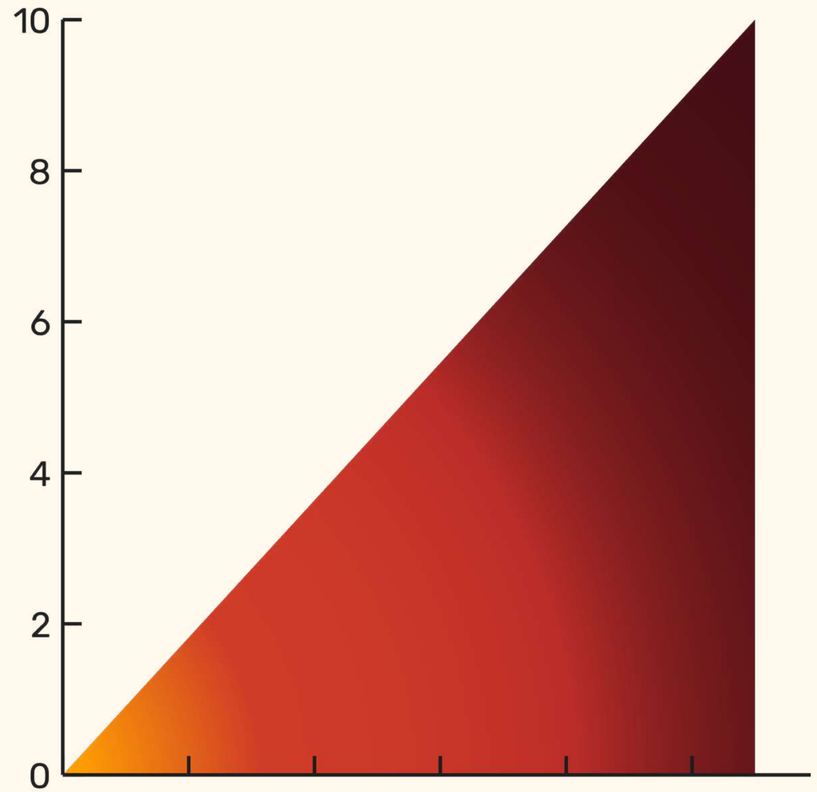

© 2026. All rights reserved.

Impact charts

Exceptionally, Eatable Adventures may use more expressive charts when the goal is not only to explain a data point, but to make a particularly powerful or memorable result visible.

This type of chart is reserved for reports, editorial covers, key finding pages or moments with an especially relevant result, where the data needs to feel more forceful, visual and narrative. **It should not be used in consulting decks, where clarity, sobriety and functional reading of the analysis must be the priority.**

In these cases, the chart may integrate the brand color system within the visualization itself, using approved gradients or a more protagonist composition. Even so, clear reading of the data must always be maintained.

El emprendedor Agrifoodtech español de **2026**

Más experimentado y cada vez más cualificado

Un ecosistema que madura desde la experiencia, eleva el nivel de exigencia y **consolida una nueva generación** de líderes tecnólogos.

Según los datos del estudio, la edad media del emprendedor es de **42 años**, con un alto nivel educativo y experiencia en el sector o emprendiendo previamente.

Continuando con lo observado otros años, el 78 % de las startups españolas emprenden en equipo y 39 % cuenta con más del 50 % de mujeres dentro del equipo fundador, reflejando una gran presencia del **emprendimiento femenino** en el sector.

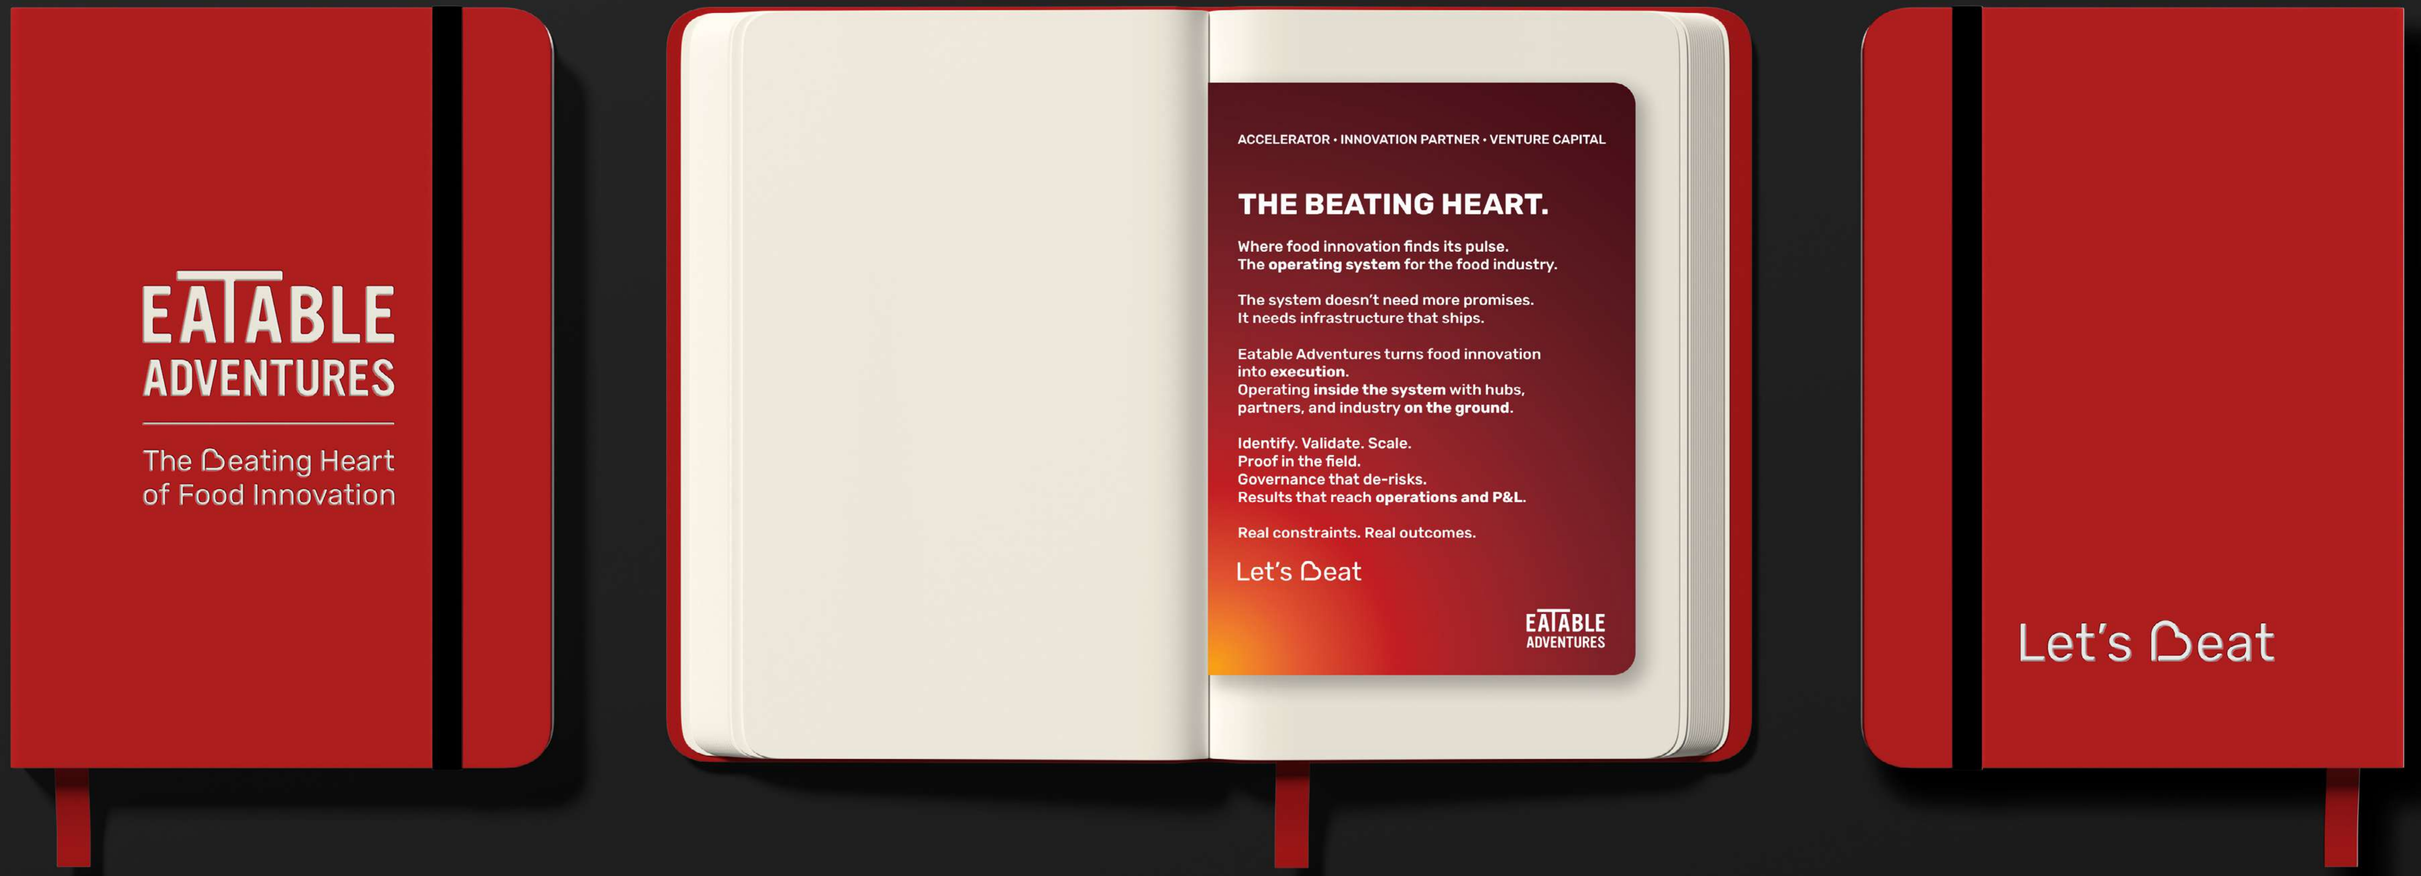

La mayoría de los emprendedores se concentra en Madrid (28 %), Cataluña (18 %) y Castilla y León (12,3 %). Se trata de un **sector exigente**, en el que 8 de cada 10 fundadores tienen experiencia emprendedora previa o experiencia en el sector.

58 %

EQUIPOS FUNDADORES CON MUJERES
